

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.5 billion.

There are a number of reasons why the world's population is growing so rapidly. One of the main reasons is that the number of children born to each woman has increased. This is due to a number of factors, including:

• *Increased life expectancy* – People are living longer, so they have more time to have children.

• *Increased birth rates* – In many developing countries, women have more children than in developed countries.

• *Increased survival rates* – More children are surviving to adulthood, so the population grows.

• *Increased immigration* – People are moving from other countries, increasing the population.

• *Increased fertility* – Women are having children at a younger age, so they have more children.

• *Increased health care* – More children are surviving to adulthood, so the population grows.

• *Increased education* – People are living longer, so they have more time to have children.

• *Increased economic growth* – People are living longer, so they have more time to have children.

• *Increased urbanization* – People are moving to cities, so the population grows.

• *Increased technological advancement* – People are living longer, so they have more time to have children.

• *Increased social stability* – People are living longer, so they have more time to have children.

• *Increased political freedom* – People are living longer, so they have more time to have children.

• *Increased environmental stability* – People are living longer, so they have more time to have children.

• *Increased cultural diversity* – People are living longer, so they have more time to have children.

• *Increased religious freedom* – People are living longer, so they have more time to have children.

• *Increased scientific advancement* – People are living longer, so they have more time to have children.

• *Increased artistic advancement* – People are living longer, so they have more time to have children.

• *Increased literary advancement* – People are living longer, so they have more time to have children.

• *Increased musical advancement* – People are living longer, so they have more time to have children.

• *Increased theatrical advancement* – People are living longer, so they have more time to have children.

• *Increased cinematic advancement* – People are living longer, so they have more time to have children.

• *Increased television advancement* – People are living longer, so they have more time to have children.

• *Increased radio advancement* – People are living longer, so they have more time to have children.

• *Increased newspaper advancement* – People are living longer, so they have more time to have children.

• *Increased internet advancement* – People are living longer, so they have more time to have children.

A

POCKET MANUAL,

OR

REPERTORY OF HOMŒOPATHIC MEDICINE,

ALPHABETICALLY AND NOSOLOGICALLY ARRANGED;

WHICH MAY BE USED AS

THE PHYSICIAN'S VADE-MECUM, THE TRAVELLER'S MEDICAL
COMPANION, OR THE FAMILY PHYSICIAN:

CONTAINING

THE PRINCIPAL REMEDIES FOR THE MOST IMPORTANT DISEASES,
SYMPTOMS, SENSATIONS, CHARACTERISTICS
OF DISEASES, ETC.

WITH

THE PRINCIPAL PATHOGENETIC EFFECTS OF THE MEDICINES ON THE
MOST IMPORTANT ORGANS AND FUNCTIONS OF THE BODY:

TOGETHER WITH

DIAGNOSIS, EXPLANATION OF TECHNICAL TERMS, DIRECTIONS FOR
THE SELECTION AND EXHIBITION OF REMEDIES,
RULES OF DIET, ETC., ETC.

COMPILED FROM THE BEST HOMŒOPATHIC AUTHORITIES,

BY

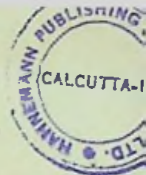

J. BRYANT, M. D.

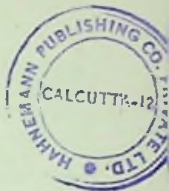

FIFTH EDITION.

PHILADELPHIA:

BOERICKE & TAFEL.

1930

INTRODUCTION.

THE DESIGN, COMPILATION, AND ARRANGEMENT OF THE MANUAL.

THE design in the compilation of this Manual has been threefold: first—to furnish Physicians, and especially beginners in Homœopathic practice, with a convenient *Vade Mecum*, or work of ready reference, at the bedside of the patient. Secondly: to provide Travellers, who are liable to attacks of illness where it is impossible to procure the services of a Homœopathic physician, with a valuable *Medical Companion*. And lastly, to supply Families, residing at a distance from any Homœopathic physician, with a work which may be used by them, as a *Family Physician* in cases of emergency, and for many of the *minor ills* that flesh is heir to. Yet in reference to the use of this work in families, and by laymen in general, the compiler would remark, that *no individuals whose knowledge of Medicine, or acquaintance with Homœopathy, is limited to this, or any similar production, should assume the responsibility of treating severe and dangerous diseases, except in cases of emergency, and then, only until the services of a Homœopathic physician can be procured; for neither this Manual, nor any work of the kind ever published, can supply the place of the intelligent Homœopathic physician at the bedside of the patient.*

In the compilation of this Manual, the *Materia Medica* of Hahneemann, the Manuals of Jahr and Bonninghausen, the Transactions of the American Institute of Homœopathy, the works of Hartman, Hering, Laurie, and other distinguished Homœopathic writers and practitioners have been consulted; and the Principal Remedies, for the most Important Diseases, Symptoms, Sensations, and Characteristics of diseases, have been given, with the Principal Pathogenetic effects of the

Medicines, on the most important Organs, and Functions of the Body, with their relative value typographically distinguished under their respective heads; and Alphabetically and Nosologically arranged in the following order, viz: The most important *Diseases, Organs, and Functions* of the body—*General Symptoms and Sensations*—*Causes and Characteristics* of diseases, and such Affections as have a *Pathological name*, are given as PRIMARY HEADS, and printed in CAPITALS. Under these Primary heads, are given, in SMALL CAPITALS, the *Symptoms, Causes, Conditions, Concomitants, Varieties of the Disease*, etc., belonging to each primary head. Under these *Subordinate heads*, which are printed in SMALL CAPITALS, are given, in *Italics*, the *variety of Symptoms, Sensations, Causes, Conditions*, etc., belonging to each subordinate head; and thus the *print*, following in the *descending order*, distinguishes the *Subordinate* from the *Primary heads*. A glance at the Manual will show its arrangement, and by bearing in mind its *Alphabetical order*, it will be easily understood.

The Medicines have been divided into *three classes*, according to their *relative value*, as indicated by the print. Those printed in CAPITALS, are medicines, which, from their pathogenic, or curative effects, are *most frequently indicated* for the diseases, symptoms, sensations, etc., under the head of which they appear. Those printed in *Italics*, are medicines of high relative value, but *less frequently indicated* than those printed in Capitals. The medicines printed in simple Roman letters, are those which *in general*, are the *least frequently indicated*, and possess the lowest relative value. Yet too much importance must not be attached to the relative value of the medicines as indicated by the print, as in many cases the *Pathogenic effects* of those medicines which are set down as being of the lowest relative value, will be found bearing the *nearest resemblance to the Symptoms manifested by the disease*, and in all such cases, they are medicines of the highest relative value, and are to be selected in preference to those printed in capitals, or italics.

ON THE SELECTION OF REMEDIES.

The fundamental principle of Homœopathic practice—THE LAW OF CURE—as discovered, demonstrated, and promulgated by the illustrious Hahnemann, and expressed by the maxim "*Similia Similibus Curantur*," is, that "*diseases are cured most*

quickly, safely, and effectually, by medicines which are capable of producing symptoms SIMILAR to those existing in the patient, and which characterize his disease:" for in accordance with the THERAPEUTIC LAW OF SIMILARITY, medicines cure affections *Similar, or like* unto those they produce.

Laymen, in the selection of a remedy, should, in the first place, carefully note down **ALL the Symptoms of which the patient complains**, together with the *state of mind*, and *characteristics of the disease*, as regards its *aggravation or amelioration according to time, circumstances, etc.*; and then proceed to collect from under the heads of the various organs, functions, sensations, etc., all those medicines, the effects of which *correspond to the various symptoms, sensations, and characteristics of the disease*; and then, from the list of medicines thus collected, select, and exhibit, that medicine, the effects of which *most nearly correspond to ALL the symptoms, sensations, and characteristics of the disease*, and especially to *all the most PROMINENT, CHARACTERISTIC, and LEADING SYMPTOMS* of the case.

If the disease is one which has a given or *pathological name*, it will be well for laymen, *after* they have made their selection of a remedy according to the directions above given, to look under the head of such given name of the disease, and see if the remedy selected is there enumerated, or set down, as being one of the remedies usually indicated in the treatment of such disease; and, if it is there found, and especially if it is there distinguished as being of high relative value, it will strengthen the probability that the selection has been judiciously made. But if the remedy is not found under the head of such given name of the disease, a re-examination should be made, in order to see that no error has been committed in the selection of the remedy. Yet, if after such re-examination, it does not appear that any error has been made in the selection, but that the remedy chosen *most nearly corresponds to the TOTALITY OF THE SYMPTOMS and characteristics of the disease*, it should then be exhibited in preference to any other, whether found under the head of the disease or not.

If, in making the selection of a remedy, the choice should fall between two or more remedies which seem equally indicated according to the totality of the symptoms, and characteristics of the disease, the preference should be given to that remedy which is distinguished by the print as being of the highest relative value.

If the producing cause of any given case of disease is discoverable, and is such that its removal falls within the province of medicine, as grief, fright, repelled cutaneous eruptions, etc., especial reference should be had, in connection with the symptoms, to those remedies, under the head of the said disease producing cause.

ON POTENCIES.

The medicines have been used by physicians at various Potencies, from the Mother tinctures, to the two thousandth attenuation. It is recommended, that laymen who use this Manual, should make use of potencies ranging from the *third*, to the *thirtieth attenuation*; and in such cases as require a higher, or lower attenuation, in order to complete the cure, the choice or selection of the potency should be left to the judgment of an experienced Homœopathic physician.

ON THE ADMINISTRATION OF MEDICINES.

The medicines may be administered by placing three or four globules of medicated pellets on the tongue, or eight or ten pellets may be dissolved in an ordinary sized tumbler two-thirds full (about a gill and a half) of pure soft water, and agitated or stirred for several minutes, until the medicine is perfectly dissolved and incorporated with the water; and a tea-spoonful of the solution given to children, and a small dessert or table-spoonful to adults. When the medicines are used in the form of Triturations, or Dilutions, from one to three drops of the dilution, or one-third of an ordinary sized penknife blade full (about one grain in weight) of the trituration may be prepared in the same quantity of water, and administered in the same manner as directed for the pellets in solution. Care should be taken that the vessel—tumbler or cup, in which the medicine is prepared, should be *perfectly clean*, and a tumbler or *glass vessel* should always be preferred in the preparation of the medicine. Cups which have been long used, as coffee or tea cups, are objectionable, and especially if the glazing is cracked, worn off, or imperfect. The medicine should be kept in a cool place, free from odors of every description, and so closely covered as to prevent the access of air. The spoon, unless it be made of silver, should never be suffered to remain in the medicine; and the same vessel should never be used for different medicines, until it has been washed and thoroughly cleansed.

ON THE REPETITION OF DOSES.

It is difficult to give explicit directions for the repetition of doses, as the time must necessarily vary according to the nature of the disease and circumstances of the case. Consequently much must depend on the judgment and discrimination of the administrator. In *acute diseases*, the proper interval between the repetition of doses, will, in general, vary from one to six hours, according to the nature of the case, or severity of the disease. In those severe and dangerous diseases, which rapidly run their course to a fatal termination, unless arrested in their progress, as Croup, Cholera, etc., it may be necessary at the commencement of the treatment, to repeat the dose at intervals of every ten, twenty, or thirty minutes, until there be a mitigation of the symptoms, when the interval between the doses should be lengthened as the patient improves.

In *chronic diseases*, the proper interval between the repetition of doses, will vary from twelve hours to as many or more days. Laymen, in prescribing for chronic diseases, should, after the exhibition of the remedy selected, carefully watch the result, and if after the lapse of twelve, or twenty-four hours, no effect of the medicine is discoverable, and the disease remains apparently the same, the same remedy may be repeated at intervals of every twelve, or twenty-four hours; and if, after several repetitions of the medicine, no effect is discoverable, it should be discontinued, and another remedy selected and exhibited with the same precaution as before. If an improvement follows the exhibition of a remedy, no more medicine should be given while the improvement continues. Yet when it ceases, and the remaining symptoms still indicate the same remedy, it may be repeated. If, after the exhibition of a remedy, a *slight aggravation of the symptoms characteristic of the medicine* should *speedily* follow its administration, no more medicine should be given, but we should patiently await the result. If the aggravation has been produced by the medicine, it will soon subside, and be followed by an improvement in the condition of the patient, which improvement should not be interfered with, but permitted to proceed without any more medicine until there is no further progress toward a cure; afterwards, the same remedy may be repeated, unless some other remedy is more clearly indicated by the remaining symptoms.

1. the *medicinal aggravation* should be *violent*, and harass

ing to the patient, it may be necessary to counteract the effects of the medicine by a suitable antidote; afterward, when the aggravation shall have entirely subsided, and the same medicine shall still be indicated, it may be repeated, and a severe aggravation guarded against, by administering a much *smaller dose*.

ON THE CHANGING OF MEDICINES.

It is necessary that laymen, and beginners in Homœopathic practice, should guard against a too frequent change of medicines. It may be laid down as a general rule, that a medicine which has been carefully selected and exhibited in conformity to the directions herein given for the selection and exhibition of remedies, should not be changed until a reasonable length of time has been allowed for its action, or while it continues to exert a salutary influence; or until a change of symptoms shall clearly and decidedly indicate some other remedy. *The frequent changing from one remedy to another, is a miserable, and most mischievous practice.* Yet a remedy should always be changed after a reasonable length of time has been allowed for its action and we perceive no effect, or when the effect is unfavorable. But respecting this last, care must be taken not to mistake a slight and salutary *medicinal aggravation*, for an unfavorable effect. A medicinal aggravation may be known by the *sudden* aggravation of the symptoms after the exhibition of the medicine—and especially of those symptoms which are *characteristic of the medicine* exhibited; which aggravation will soon subside, and be followed by an improvement in the condition of the patient. An *unfavorable effect* may be known by the *gradual* and *progressive* aggravation of the disease, and without its partaking of the characteristics of the medicine, and without any amelioration in the sufferings of the patient, but rather a continuous increase of suffering, and the manifestation of such symptoms as belong to the more advanced stages of the malady.

ON DIET.

All articles of diet, and drinks, which contain *medicinal properties*, are strictly prohibited under Homœopathic treatment: as, coffee, green tea, and herb teas of every description; ginger, pepper, vinegar, mustard, allspice, cinnamon, cloves, and spices of all kinds: and every variety of vegetable food of an *aromatic* or *medicinal character*; as onions, garlic, asparagus, radishes, tomatoes, celery, parsley, parsnips,

artichokes, mushrooms, etc.; and every variety of animal food, *strongly scented*, or *difficult of digestion*; as old smoked meat, bacon, fat pork, sausages, tongue, veal cutlets, rancid butter, strong cheese, and the flesh of all *very young animals*: in short, every variety of food usually considered objectionable, or of a *doubtful character* for invalids, is strictly prohibited under Homœopathic treatment.

In acute diseases, the diet should consist of the most light and nutritious kinds of food; such as toast water, barley water, rice water, panada, arrowroot gruel, and such other light and simple kinds of food as are generally allowed in such cases. When the more violent symptoms of the disease have subsided, and the patient is convalescent, more substantial food may be allowed, *in moderate quantities*, such as beef tea, chicken tea, boiled rice, farina, toast, rice and bread puddings, light bread, and biscuits free from soda or pearlash, and *not newly baked*; and in most cases, where there is neither colic nor diarrhœa, *sweet, ripe, and juicy* fruits may be allowed in moderate quantities at a time, such as *sweet grapes, sweet cherries, and ripe peaches*.

In chronic diseases, almost every variety of *wholesome, nutritious, and easily digested* food may be allowed, providing it does not answer the description of such kinds of aliments as are above prohibited.

As a *drink*, pure *water* should be allowed in all cases, except it disagree with the patient, and in such cases toast water, barley water, or rice water should be substituted.

RULES TO BE OBSERVED UNDER HOMŒOPATHIC TREATMENT.

In addition to what has already been said under the preceding heads, it is important, under Homœopathic treatment, to enjoin the absolute necessity of guarding against all extraneous influences which may have a tendency to neutralize or counteract the effects of the medicines—as medicated baths and poultices, the smelling of camphor, hartshorn, cologne, and all kinds of flowers and perfumery. Cosmetics and tooth powders are to be avoided; and all kinds of artificial and mineral waters, distilled and fermented liquors, unless allowed by the physician. The room of the sick should be well ventilated, and be kept free from all odors. Flowers, and plants of every description, should always be excluded from the chamber of the sick. Strong mental

emotions, as anger, grief, care, etc., should be guarded against. In short, every variety of circumstance, whether of a physical or moral nature, which might have a tendency to counteract the influence of the medicines, or retard the recovery of the patient, should be carefully avoided.

CONCLUSION.

In presenting this work to the profession and the public, the Compiler would remark, that he has by much labor, diligent research, and careful comparison, endeavored to compile a large amount of valuable matter, in a correct, brief, and comprehensive manner. Yet it is not pretended that this Manual is a *full, complete, or perfect* Repertory, or that in its compilation all errors have been avoided, and especially such as regard the true *value of the remedies* in all cases, as indicated by the print. Yet the Compiler flatters himself that the work will be found in the main, as substantially correct as any other of the kind that has yet appeared in the English language; and if the work, as it is, shall be found to answer the general purposes for which it is intended, and contribute in any degree to the advancement of the interests of Homœopathy, and the consequent relief of human suffering, the object in its compilation will have been gained.

J B.

LIST

OF

MEDICINES CONTAINED IN THIS MANUAL,

WITH THEIR

TECHNICAL NAMES, ABBREVIATIONS, AND ANTIDOTES.

NOTE.—In the following list, the **POLYCHREST** medicines, or those which have hitherto been *most extensively used*, are printed in **SMALL CAPITALS**—and the chief of them distinguished by an asterisk: the *Semi polychrests* are printed in *Italics*; and those which have been less extensively or seldom used, have no distinction.

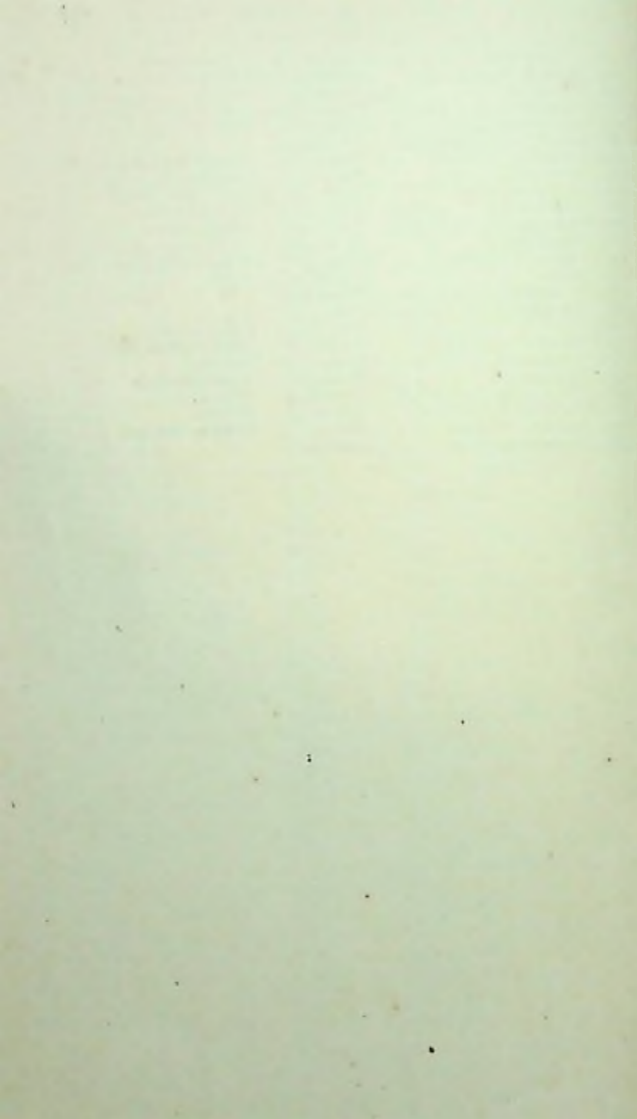

MEDICINES.	ABBREVIATIONS.	ANTIDOTES.
1. * ACONITUM NAPELLUS.	Acon.	Camph. nux-v.
2. Æthusa.	Æth.	Vegetable acids.
3. Agaricus muscarius.	Agar.	Camph. coff. puls.
4. Agnus castus.	Agu.	Camph.
5. Aloe spicata.	Aloe.	Camph.
6. <i>Alumina.</i>	Alum.	Bry. camph. ipec.
7. <i>Ambra grisea.</i>	Amb.	Camph. nux-v. puls.
8. Ammoniacum.	Am.	Senega?
9. <i>Ammonium carbonicum.</i>	Am-c.	Arn. camph.
10. Ammonium causticum.	Am-caus.	Dilute vinegar.
11. <i>Ammonium muriaticum.</i>	Am-m.	Ars. camph. coff.
12. <i>Anacardium.</i>	Anac.	Camph. coff.
13. Angustura.	Ang.	Coff.
14. Anisum stellatum.	Anis.	?
15. ANTIMONIUM CRUDUM.	Ant.	Hep. merc. puls.
16. Argentum.	Arg.	Merc. puls.
17. <i>Argentum nitricum</i>	Arg-nit.	Merc-c. natr-m.
18. * ARNICA MONTANA.	Arn.	Camph. ign. ipec.
19. * ARSENICUM ALBUM.	Ars.	Chin. ferr. kal.
20. Artemesia vulgaris.	Art.	?
21. Arum vulgare.	Arum.	Vinegar.
22. <i>Asafetida.</i>	Asa.	Camph. chin.
23. Asarum.	Asar.	Camph. vinegar.
24. <i>Aurum.</i>	Aur.	Bell. chin. cupr.
25. Aurum fulminans.	Aur-ful.	?
26. Aurum muriaticum.	Aur-mur.	Bell. chin. cupr.
27. <i>Baryta carbonicum.</i>	Bar-c.	Camph. dulc. merc.
28. <i>Baryta muriaticum.</i>	Bar-m.	Camph. dulc. merc.
29. * BELLADONNA.	Bell.	Camph. coff. puls.
30. Berberis vulgaris.	Berb.	Camph.

MEDICINES.	ABBREVIATIONS.	ANTIDOTES.
31. Bisnuth.	Bis.	Calc. caps. nux-v
32. <i>Borax veneta.</i>	Bor.	Cham. coff.
33. Bovista.	Bov.	Camph.
34. Branca ursina.	Branc.	Camph. acids.
35. Bromine.	Brom.	Camph. coff.
36. Brucea anti-dysenterica.	Bruc.	Cham. coff. op.
37. *BRYONIA ALBA.	Bry.	Acon. cham. nux-v.
38. <i>Caladium seguinum.</i>	Calad.	Carb-v. caps. merc.
39. *CALCAREA CARBONICA.	Calc.	Camph. sulph.
40. <i>Calcarea causticum.</i>	Calc-caus.	Bry. nux-v.
41. <i>Calcarea phosphorica.</i>	Calc-ph.	?
42. <i>Calendula officinalis.</i>	Calend.	?
43. <i>Camphora.</i>	Camph.	Op. vinegar.
44. <i>Cannabis sativa.</i>	Cann.	Camph.
45. <i>Cantharis.</i>	Canth.	Camph.
46. <i>Capsicum.</i>	Caps.	Camph.
47. <i>Carbo animalis.</i>	Carb-an.	Ars. camph. coff.
48. CARDO VEGETABILIS.	Carb-v.	Ars. camph. coff.
49. Castoreum.	Cast.	Camph. op.
50. <i>Causticum.</i>	Caus.	Coff. coloc. nux-v.
51. *CHAMOMILLA.	Cham.	Acon. coff. nux-v.
52. <i>Chelidonium.</i>	Chel.	Camph.
53. *CHINA OFFICINALIS.	Chin.	Ars. puls. sulph.
54. <i>Chininum sulphuricum.</i>	Chin-s.	Ferr?
55. <i>Cicuta virosa.</i>	Cic.	Aru. tab.
56. <i>Cimex lectularis.</i>	Cim.	?
57. <i>Cina.</i>	Cin.	Bry. chin. ipec.
58. <i>Cinnabaris.</i>	Cinn.	Chin. op. sulph.
59. <i>Cinnamonium.</i>	Cinum.	?
60. <i>Cistus canadensis.</i>	Cist.	?
61. <i>Clematis erecta.</i>	Clem.	Bry. camph.
62. <i>Coccionella.</i>	Coccion.	?
63. <i>Cocculus.</i>	Coccc.	Camph. nux-v.
64. <i>Coffea crudca.</i>	Coff.	Cham. ign. nux-v.
65. <i>Colchicum.</i>	Colch.	Croc. nux-v. puls.
66. <i>Colocynthis.</i>	Coloc.	Caus. cham. coff.
67. <i>Convolvulus.</i>	Conv.	?
68. <i>Conium maculatum.</i>	Con.	Coff. nitr-sp.
69. <i>Copavie balsamitis.</i>	Cop.	Camph. merc.
70. <i>Corallium rubrum.</i>	Cor.	Calc.
71. <i>Crocus sativus.</i>	Croc.	Bell. op.
72. <i>Crotalus horridus.</i>	Crotal.	Ars. bell. phos.
73. <i>Croton tiglium.</i>	Crot.	?
74. <i>Cuprum metallicum.</i>	Cupr.	Bell. chin. nux-v.
75. <i>Cuprum aceticum.</i>	Cupr-acet.	Bell. chin. nux-v.
76. <i>Cuprum carbonicum.</i>	Cupr-carb.	Bell. chin. nux-v.
77. <i>Cyclamen.</i>	Cyc.	Puls.
78. <i>Daphne indica.</i>	Daph.	Bry. dig. rhus.
79. <i>Dioscina.</i>	Diad.	Merc.
80. <i>Digitalis.</i>	Dig.	Nux-v. op.
81. <i>Drosera.</i>	Dros.	Camph.
82. <i>Dulcamara.</i>	Dule.	Camph. ipec. merc.
83. <i>Elaterium.</i>	Elat.	?
84. <i>Eugenia umbos.</i>	Eug.	Coff.
85. <i>Eupatorium.</i>	Eup.	?
86. <i>Euphorbium.</i>	Euphorb.	Camph.

MEDICINES.	ABBREVIATIONS.	ANTIDOTES.
87. <i>Euphrasia.</i>	Euphr.	Camph. puls.
88. <i>Evonymus.</i>	Evon.	?
89. <i>Ferrum metallicum.</i>	Ferr.	Ars. chin. hep.
90. <i>Ferrum aceticum.</i>	Fer-acet.	Ars. chin. hep.
91. <i>Ferrum carbonicum.</i>	Fer-carb.	Ars. chin. hep.
92. <i>Ferrum magneticum.</i>	Fer-mag.	Ars. chin. hep.

Consult causes.

AMAUROSIS (gutta serena, paralysis of the optic nerve).

Diagnosis. Blindness without obscuration of the humors of the eye. The pupil is dilated, and the contractility and sensibility of the iris to light is greatly diminished, or entirely annihilated. In *amaurosis crethistica*, the blindness is only partial, and the symptoms nearly the reverse of the above; the eye exhibiting an *extreme sensibility to light*, the patient seeing best at dusk, or when the light is very feeble; all colors appear brighter, and white objects appear brilliant: the pupil is contracted—sometimes movable, and at other times distorted, and sometimes contracting in a very irregular manner. In either form of the disease the cure is often difficult. The principal remedies, are, IN GENERAL, for

AMENORRHOEA (suppressed menstruation). See: MENSTRUATION.

AMYGDALITIS (inflammation of the tonsils). See: QUINSY.

ANASARCA (dropsy of the cellular tissue). *Diagnosis.*

Dropsical swelling pervading the entire cellular tissue (*general anasarca*), or in single parts, as in the hands and feet (*œdema*). The pulse is sometimes normal, although generally quick and variable; the skin dry, and generally pale, yet sometimes inflamed, presenting an erysipelatous appearance. Urine scanty and high-colored; thirst, oppressed respiration, and difficulty of remaining in a recumbent posture, are in general the predominant symptoms. *Remedies*, IN GENERAL: Acon. ant. Ars. bell. bry. camph. canth. Chin. colch. con. Dig. dulc. HELL. lach. lact. led. mere. rhus. samb. sol-nig. squill. sulph.

SCARLATINA (after): Arn. Ars. bor-m. bell. dig. HELL. ph-ac. sen.

Compare: DROPSY, and the *particular symptoms*.

ANEURISM (morbid dilatation of an artery) *Diagnosis.*

A pulsating tumor which disappears on pressure, but returning as soon as the pressure is removed. *Remedies*, IN GENERAL: Amb. Arn. carb-v. calc. caus. ferr. guaj. graph. lach. lyc. natr-m. sulph. zinc.

ANEURISM BY ANASTOMOSIS (a vascular pulsating tumor, formed by the enlargement, and inosculation of numerous small arteries and veins; sometimes congenital (*nævus maternus*)). *Remedies*, IN GENERAL: Carb-v. caus. lyc. plat. Thuj.

ARTHRITIS

TOES (in the). *Amb. arg. arn. caus. chin. cin kal. LEd. lyc nux-v. rhus. SABIN. sep. stront. SULPH. zinc.*

Consult *causes*,—compare PAINS; and see: NODOSITIES, ARTHRITIC, &c.

ARTHROCACE (inorbus coxarius). See: COXARTHROCACE.

ASCITES (dropsy in the abdomen). *Diagnosis.* Tumescence and tension of the Abdomen, with fluctuation on percussion, and gravitation of the swelling to the posture of the patient. Thirst, dryness of the skin, mouth, and tongue, with scanty and high-colored urine; and, frequently, fever, cough, intermittent pulse, and oppressed respiration are its accompaniments. *Remedies.* IN GENERAL: *Acon. ant. Ars. bry. Chin. Colch. dig. HELL. kal. led. lyc. merc. prun. sep. squill. sulph.*

Consult *causes*—compare with the *particular symptoms*, and see: DROPSY.

ASPHYXIA (apparent death). *Remedies.* IN GENERAL: *Acon. arn. ars. bar. c. bell. carb-v. chin. coff. lach. laur. nitr-ac. nux-v. op. ph-ac. tart.*

DROWNING (from): Elevate the head and shoulders, cleanse the mouth and nostrils, apply friction and heat; and give Lachesis on the tongue, and in injections. If these means fail, place the body in a warm bath, rub briskly, yet gently with the hand; cautiously apply spirits of hartshorn, or spirits of camphor to the nostrils, and carefully endeavor to inflate the lungs. It is said that passing a stream of electricity or galvanism through the chest promises to be of great service.

FROST or Cold (from): Rub or cover the body with snow, or use a cold salted bath. Give small injections of camphor, and if signs of life appear, use small injections of coffee. When able to swallow, give a few tea-spoons full of weak coffee; and for the pains succeeding restoration, give, *Ars.* or *carbo-vegetabilis*.

HUNGER, or Starvation (from): Give injections of warm milk. When able to swallow, give a few drops of milk, gradually increasing the quantity to a tea-spoonful; afterward a little chicken or beef tea. Beware of hearty, or much food for several days.

LIGHTNING (from): Strip, and dash cold water on the body, and especially on the neck, face, and chest. If the body be cold, apply warmth and friction; and carefully en

ASPHYXIA :

deavor to inflate the lungs. Also, give *arn?* or *nux-v.* on the tongue, and in repeated injections.

MECHANICAL INJURIES,—Falls, Bruises, &c. (from): Give *Arnica* on the tongue, and a weak solution by injection. If much blood has been lost, give *Chin.* and afterward *Arn.* If no blood has been lost by the injury, bleeding may sometimes be of benefit.

NEW-BORN INFANTS (of): Give *Tartar emeticus*; if it fails and the face be *red*, give *Acon.*—if *pale*, *Chin.*—if *blue*, *Op.* and use friction, and a warm bath.

NOXIOUS VAPORS, or deleterious gases (from): Place the body in a current of fresh air: and dash cold water on the neck, face, and chest; sprinkle the face occasionally with water and vinegar, and as the patient revives apply it occasionally to the nose. Also, give *Acon.* *bell.* *Op.* or *nux-v.* and See: **POISONS.**

STRANGULATION (from): Give *op.* on the tongue, and a few drops of the tincture in injections. Carefully inflate the lungs; and use warmth, and friction.

ASTHMA (a disease in which difficulty of breathing is the predominant symptom). *Diagnosis.* Dyspncea without fever, occurring in paroxysms attended with a sensation of suffocating constriction of the chest, with cough, and wheezing respiration. In some cases the cough is dry (*asthma sicca*), in other cases the cough is attended with expectoration (*asthma pituita*); the expectoration is at first scanty and glutinous, and afterward more copious; relief is generally afforded as the expectoration increases in quantity. The principal remedies, are, **IN GENERAL**: *Acon.* *am-c.* *am-nl.* *ant.* *Ars.* *asa.* *aur.* *bell.* *bry.* *calc.* *camph.* *carb-v.* *caus.* *cham.* *chin.* *cocc.* *coff.* *cupr.* *ferr.* *fer carb.* *graph.* *hep.* *hyos.* *ign.* *iod.* *IPEC.* *lach.* *lact.* *led.* *lob.* *lyc.* *merc.* *mosch.* *nitr-ac.* *n-mos.* *Nux-v.* *op.* *phos.* *plat.* *puls.* **SAMB.** *sang.* *sen.* *sep.* *sil.* *spig.* *spong.* *stann.* *staph.* *stram.* **SULPH.** *tart.* *verat.*

 Compare: WARMTH.
- BELCHING (eructation). See: ERUCTATIONS.
- BILIOUS FEVER (febris biliosa). *Diagnosis.* The symp-
 toms usually predominant, are,—fulness in the epigas-
 trium, lassitude, headache, eructation, nausea, and some-
 times vomiting of bilious matters. Tongue coated yel-
 lowish, or brown, the bowels costive, or lax, and, in the
 latter case, the evacuations are often very offensive, and
 of a greenish, yellowish, or brownish color. The skin is
 usually hot and dry, and of a yellowish cast. There is
 generally great restlessness, excessive thirst, and longing
 for acids. The pulse full, quick and soft, irregular or
 intermittent. The urine thick, cloudy, and high-colored.
Remedies, IN GENERAL: Acon. ars. Bry. cham. chin. coloc

CHIRAGRA (gout in the hands). See: ARTHRITIS.

CHLOROSIS (green sickness). *Diagnosis.* Pale, sickly complexion, deficient warmth, lassitude, physical and mental weakness, emaciation, depraved appetite, weak digestion, palpitation of the heart, and œdema of the feet and lower extremities, are some of the most prominent symptoms of this disease. *Remedies.* IN GENERAL: *Ars.* bar-c. bell. CALC. *carb-v.* chin. COCC. CON. dig. FERR. *fer-carb.* graph. hell. ign. kal. *Lyc.* merc. *natr-m.* *nitr-ac.* nux-v. *phos.* *ph-ac.* PLAT. *plumb.* PULS. sep. spig. staph. SULPH.

CHOLERA (Asiatic cholera, or cold plague). *Diagnosis.* In the most common variety of this disease, the attacks are usually preceded by a diarrhœa, in which the evacuations, consisting at first of fecal matters, shortly become yellowish, greenish, and watery, and finally flocculent, having the appearance of rice water with little flocks or specks floating in it. Shortly after this, the patient is attacked with violent vomiting, and purging, cramps, pains in the stomach and abdomen, with great anxiety, weakness, coldness of the extremities, or of the whole surface of the body. The urine and perspiration is entirely suppressed; the pulse small, intermittent, or imperceptible; the skin cold and bluish, and the countenance hippocratic. IN GENERAL, the *Principal Remedies* are: *Ars.* bell. CAMPH. *carb-v.* cham. cic. *cupr.* *hydr-ac.* *ipcc.* *jat.* nux-v. *phos.* *ph-ac.* sec. VERAT.

In the majority of ordinary cases of Cholera, two drops of the Tincture of Camphor should be given in a dessert-spoonful of sugar water, every ten or twenty minutes, during the first hour; and if improvement follow, continue the remedy at longer intervals, until the most alarming symptoms have subsided, when some other

CHOLERA :

remedy should be selected in accordance with the remaining symptoms.

In *slight attacks* of Cholera, *Ipec.* and *verat.* may be given in alternation, once in fifteen minutes at the commencement of the treatment, and the interval between the repetition of doses lengthened as the patient improves.

In *all cases*, where there is *neither thirst, vomiting, nor purging, but rapid failure of strength, blueness, and icy coldness of the body, burning pains in the stomach, inconsolable anguish, and dread of suffocation*, give CAMPHOR, as above directed. If spasms ensue, with cramps in the calves of the legs, great thirst, *weakness, excessive coldness, frequent, sudden, and violent vomiting and purging*, VERATRUM is the principal remedy. If, in addition to vomiting and diarrhœa, there is *pressure in the stomach and epigastrium, violent pains in the abdomen, spasmodic colic, and bloody evacuations*—Cuprum should be exhibited. When there is *great anxiety, excessive anguish, fear of death, violent thirst, intolerable burning in the stomach and bowels, with cutting, cramplike pains in the abdomen, scalding evacuations, cold and clammy skin*, ARSENICUM is the remedy. In the last stages of Cholera, or *Stage of Collapse*, give: *Ars. camph. Carb-v. cic cupr. hydr-ac. laur. phos. ph-ac. sec. or veratrum*, in accordance with the *particular symptoms*, which see: under their respective heads.

For *Choleric* or the *diarrhœa preceding an attack of Cholera*, or during the prevalence of the epidemic, Consult: *Ars. camph. cham. ipec. nux-v. phos. ph-ac. sec. verat.* and compare with: DIARRHœA.

As *Prophylactics*, or preventives of Cholera, *Camphor, Cuprum, and Veratrum* enjoy the highest reputation. The former to be taken in a dose of one drop of the tincture before entering the room of a cholera patient; and the two latter to be taken in alternation, in doses of four or six globules of the third potency, every other morning.

For a description of the several varieties of this disease, and the corresponding treatment, see Joslyn's, Humphrey's, and other works on Cholera.

CHOLERA INFANTUM (summer complaint in children).
See: DIARRHœA.

CHOLERA MORBUS (sporadic cholera). *Diagnosis.* Sudden attacks of vomiting and purging, accompanied with pain in the stomach and bowels. In severe cases there is great anxiety, hurried respiration, thirst, coldness of the extremities, cramps, great prostration, and sometimes fits of fainting, spasms, and convulsions. *Remedies, IN GENERAL:* *Ars. cham. chin. coloc. cupr. elat. COUP DE SOLEIL (sun stroke). See: SUN STROKE.

COXALGIA (coxagra, ischias, hip-gout). *Diagnosis.* A painful gouty inflammation of the hip-joint, frequently terminating in suppuration (coxarthrocace). The pain frequently extends upward to the loins, and downward to the front part of the knee, and is greatly aggravated by motion, and stepping on the affected limb. It is distinguished from sciatica by the pain being ameliorated by rest, and by its not following the course of the sciatic nerve. *Remedies, IN GENERAL:* *Acon. arg. ars. asa. aur. BELL. bry. calc. caus. cham. canth. coloc. dig. hep. lach. mang. MERC. nitr-ac. nux-v. puls. rhus. sep. staph. sulph.*

COXARTHROCACE (coxarius morbus, hip-joint disease). *Diagnosis.* Chronic inflammation of the hip-joint; which, if unchecked, terminates in suppuration and caries, destroying the head of the femur, and producing luxation outward and upward. At the commencement of the disease, the pain is usually felt in the knee, and is sometimes mistaken for a disease of that joint, a mistake that should be carefully guarded against. The pain is aggravated by motion and pressure, and ameliorated by rest (distinguishing it from sciatica). The disease is most frequently met with in children. *Remedies, IN GENERAL:* *BELL. calc. calc-ph. Coloc. hep. lach. mang. MERC. ph-ac. puls. rhus. sep. sil. staph. sulph.*

CRACKS (chaps, fissures, rhagades). See: CHAPS.

CRAMPS (tonic spasms). See: SPASMS, Toxic, and the *Particular organs affected.*

CRITICAL AGE (menoposia). See: MENOPOSIA.

CROUP (angina membranica). *Diagnosis.* Short, difficult, wheezing, whistling, or rattling respiration; accompanied with anxiety, hoarseness, fever, and a *rough, croaking, barking, wheezing, whistling, or ringing cough.* This disease is liable to be confounded with the *asthma of Millar*; but is distinguished from it by the presence of *fever and red urine.* *Remedies, IN GENERAL:* *Acon. am-m. ars. brom. hep. cupr. dros. iod. kal-bich. lach. mosch. phos. samb. SPONG. tart.* In the majority of cases, *Acon*

CROUP :

and *spong.* should be given in alternation, once in fifteen minutes during the *inflammatory stage*. After the cough becomes loose, give *Hep.* in alternation with *Acon.* or *Spong.* unless some other remedies are more clearly indicated. For the hoarseness and cough remaining after an attack of croup, consult: *Carb-v. dros. hep. lyc. phos.* To overcome a *disposition* to croup: *Lyc.* and *phos.* have been recommended.

CRUSTA LACTEA (milk crust). See: MILK CRUST.

CYANOSIS (morbus cœruleus, blue disease). *Diagnosis.* Blue or livid color of the skin, especially of the face and extremities; with difficulty of breathing, especially when exercising. This disease is attendant on malformation of the heart. *Remedies, IN GENERAL:* *Acon. am-c. ang. arn. ars. aur. bell. bry. camph. cocc. con. Cupr. Dig. Lach. laur. merc. natr-m. nux-v. op. phos. puls. rhus. samb. sec. sil. spong. VERAT.*

CYNANCHE (angina, sore throat). See: ANGINA.

CYSTITIS (inflammation of the bladder). *Diagnosis.* Burning pain in the region of the bladder, with heat, tumefaction, tension, and painful sensibility to the touch. Thirst, fever, frequent and painful discharge of hot, red urine, or retention of urine, strangury, and tenesmus. Constipation, hiccough, and vomiting, frequently accompany the disease. *Remedies, IN GENERAL:* *Acon. calc. camph. cann. CANTH. dig. graph. kal. lyc. mez. nux-v. puls. sep. sulph.*

CYSTOPLEGIA (paralysis of the bladder). *Remedies, IN GENERAL:* *Acon. ars. bell. cic. dulc. hyos. lach. laur. nux-v. petr.*

CYSTORRHOEA (catarrh of the bladder). *Diagnosis.* Discharge of mucus with the urine, sometimes accompanied with ischuria, or difficult micturition. *Remedies, IN GENERAL:* *Amb. ant. calc. con. cop. cann. DULC. kal. merc. nux-v. phos. PULS. SULPH. terb.*

CYSTOSPASMUS (spasm of the bladder); *Remedies, IN GENERAL:* *Asa. caps. hyos. ph-ac. prun. sass. sep. terb.*

ENCEPHALITIS (inflammation of the brain). *Diagnosis* Coma, or constant delirium, or both united; with fever, and signs of sanguineous congestion to the head. When the inflammation occupies the membranes of the brain (meningitis), pain is present, and is sometimes violent; when seated in the substance of the brain, it is attended with a sensation of weight or pressure rather than of pain. The inflammation, however, generally includes both the brain and its membranes; and, in addition to the above-named symptoms, there is usually great heat in the head, violent throbbing of the carotid and temporal arteries, redness and fullness of the face and eyes, the pulse variable—sometimes quick, weak, and intermittent, and sometimes very full, slow, and strong. The pupils of the eyes are often immovable, and in the early stage of the disease contracted; but as the disease progresses they become dilated, and the eyes void of expression. Grasping at the head, sudden starts, heavy sleep, or constant agitation and tossing about, with great sensibility to noise, fits of screaming (especially in children), and disposition to bury the head in the pillow, are, with various other phenomena, as nausea, vomiting, and involuntary evacuations, concomitant symptoms of inflammation of the brain. *The principal remedies* are, **IN GENERAL**: *ACON. BELL. bry. camph. canth. em. cupr. cupr-acet. dig. hell. hyos. lach. merc. op. rhus. stram. sulph.*

Compare with the *particular symptoms*, under their respective heads.

ENTERITIS (inflammation of the bowels). *Diagnosis*. Violent burning or pungent pain in one part or spot in the abdomen; which is bloated, hot, and very sensitive and painful to the touch or pressure: also, anxiety; sobbing; violent thirst; quick, small, wiry pulse; obstinate constipation, and vomiting of slime and gall, and sometimes of excrements. The disease is rapid in its course, and terminates in perfect resolution, suppuration, or death by gangrene. *Remedies*, **IN GENERAL**: *ACON. ant. ars. arum. bell. bry. canth. cham. chin. colch. coloc. hyos. ipec. lach. Also, See: HERPES; and ERUPTIONS, on *particular Organs*; and, Eruptive diseases, under the head of their *Pathological name*.

FRYSIPELAS (St. Anthony's fire). *Diagnosis*. A peculiar kind of inflammation, presenting a superficial shining redness of the skin, which disappears on pressure, but returns as soon as the pressure is removed. Severe attacks of this disease are usually ushered in with a chill, succeeded by heat, nausea, headache, and symptoms of gastric derangement, with a greater or less degree of fever. The inflammation is accompanied with pricking, burning, pungent, or scalding pain. In some cases, blisters form on the inflamed surface (erysipelas pustulosum), which sometimes degenerate into very painful and malignant suppurations (erysipelas gangrenous). When the face and head are attacked, it is frequently attended with violent cerebral affections, as sopor, and delirium. *Remedies, IN GENERAL*: Acon. am-c. ant. arn. ars. bar-c. HÆMALOPIA (effusion of blood in the eye). Remedies, IN GENERAL: Bell. cham. chin-s. lach. nux-v.

HÆMATEMESIS (vomiting of blood from the stomach). *Diagnosis.* Vomiting of blood, or blood mixed with mucus or the contents of the stomach. The disease is

HÆMATEMESIS :

usually accompanied with great anxiety, nausea, and tumefaction in the epigastric or precordial region, with discharge of black coagulated blood by stool. Sometimes there is pain in the region of the stomach, fever, cold sweats, fits of fainting, great prostration, small weak intermittent pulse, and hippocratic countenance. This disease, which sometimes occurs periodically, may result from suppressed menstrual, or habitual hæmorrhoidal discharges, or from scirrhus, or other serious affections of the stomach. *Remedies*, IN GENERAL: *Acon.* an-c. ant. *Arn.* ars. arum. bell. bry. calc. camph. cann. canth. carb-v. caus. cham. chin. cic. cupr. dros. FERR. hep. hyos. iod. IPEC. lach. led. lyc. merc. mez. nitr-ac. nux-v. op. Phos. plumb. puls. rhus. sec. sep. sil. stann. sulph. vcrat.

HÆMATOCELE (effusion of blood in the scrotum. It is distinguished from *Hydrocele* by its greater weight and firmness, its want of transparency, and obscure fluctuation). *Remedies*, IN GENERAL: *Arn.* clem. nux-v. puls. rhus. sulph. zinc.

HÆMATURIA (hæmorrhage from the bladder). *Remedies*, IN GENERAL: *Canth.* chin. LYC. MEZ. MILL. nux-v. phos. puls. Consult causes, and Compare: URINE BLOODY.

HÆMOPTYSIS (coughing up, or spitting of blood from the lungs). *Remedies*, IN GENERAL: *Acon.* an-c. *Arn.* ars. bell. bry. carb-v. CHIN. croc. dig. dale. FERR. hyos. IPEC. lach. led. lyc. merc. mill. nitr. nitr-ac. phos. puls. rhus. sep. sil. staph. squill. sulph. sulph-ac.

HEPATIC SPOTS (maculæ hepaticæ). *Remedies*, IN GENERAL: *Ant. con.* hyos. *lyc.* merc. *natr.* nux-v. *sep.* sulph.

HEPATITIS (inflammation of the liver). *Diagnosis.* When the inflammation is seated on the outer surface or convex side of the liver, there is severe pain in the right hypochondrium, accompanied with burning, or stitches, which extend to the shoulder and sternum, and sometimes even to the right foot. The pain, and the short dry cough attendant on the disease, is increased by inspiration, and the patient finds it impossible to lie on the right side. When the inflammation occupies the concave part or substance of the liver, the patient complains of a sensation of pressure rather than of pain in the region of the liver, and finds it difficult or impossible to lie on the left side. In this case the biliary system is more affected, and the countenance sometimes assumes a complete jaundiced appearance, with bitter taste in the mouth, vomiting, and high-colored urine. In either case the right hypochondrium is bloated, hot, and painful on pressure; with dry skin, hard quick pulse, thirst, high-colored urine, and the usual signs of inflammatory fever. *Remedies*, IN GENERAL: *ACON.* arn. *bell.* Bry. calc. canth. *cham.* chin. *kal.* lach. *magn-m.* Merc. HOME-SICKNESS (nostalgia). See: NOSTALGIA.

HOOPING-COUGH (pertussis, chin cough). *Diagnosis.* Paroxysms of violent, convulsive, suffocating cough; attended with a whistling or hooping inspiration, and frequently terminating in vomiting of food and mucus. In severe cases, during the paroxysm, the face becomes livid and swollen, and blood frequently escapes from the mouth and nostrils, and there seems to be an entire cessation of respiration, as if from spasm of the lungs. The paroxysms usually occur every two or three hours, and in some cases more frequently, and are generally worse during the night, and every other day. During the interval between the paroxysms the chest and respiration are entirely free, and the patient, except being weak, exhibits no apparent symptoms of disease. Pathologists

HOOPING-COUGH :

distinguish three stages in the course of this disease, viz : the febrile or catarrhal ; the nervous or convulsive ; and the adynamic or stage of debility ; which last is characterized by longer intermissions between the paroxysms, but increased prostration of strength. *Remedies, IN GENERAL* : Acon. amb. anac. Arn. BELL. bry. carb-v. cham. chin s. cin. cupr. DROS. dule. ferr. hep. iod. IPEC. kal. lach. lact. led. merc. nitr-ac. nux-v. op. phos. puls. samb. sep. sulph. tart. verat.

CATARRHAL, or Irritative stage : Acon. BELL. carb-v. cham. dule. hep. IPEC. merc. nux-v. puls. tart. verat.

CONVULSIVE Stage : Anac. bell. carb-v. cin. CUPR. DROS. iod. IPEC. lact. merc. nux-v. op. puls. tart. VERAT.

DEBILITY (stage of) : Arn. carb-v. cham. dule. hep. puls. sep. sulph. tart. verat.

HORDEOLUM (stye). *Remedies, IN GENERAL* : Acon. am-c. bry. calc. hep. lyc. merc. phos. PULS. rhus. sep. STAPH. sulph. thuj.

HOUSEMAID'S KNEE (inflammation and painful swelling of the knee, resulting from the effects of kneeling, or injury of the *bursa mucosa*). *Remedies, IN GENERAL* : Arn. con. phos. puls. rhus. ruta. sil.

HYDRARTHRA (dropsy of the knee-joint). *Remedies, IN GENERAL* : Ant. ars. bry. calc. con. dig. iod. merc. rhus. sil. SULPH.

HYDROCELE (dropsy in the scrotum). *Remedies, IN GENERAL* : Arn. ars. chin. con. dig. graph. hell. hep. merc. nux-v. puls. rhod. sil. sulph.

HYDROCEPHALUS (dropsy of the brain). *Diagnosis.* The usual symptoms of hydrocephalus are, drowsiness, stupidity, squinting, dilated pupils, grinding of the teeth, sudden starts, grasping at the head, fits of screaming, delirium, and sometimes deep sopor. The eyes are usually red, and void of expression, or have a peculiar staring look, with trembling of the pupil. The patient frequently manifests a disposition to remain in a recumbent posture, or to lean the head forward, or sideways, as if for support ; or to lie on the face and bury the head in the pillow. This disease is frequently preceded by and bears a near resemblance to encephalitis ; and is most frequently met with in children, and especially in

HYDROCEPHALUS:

those with large heads and open fontanels. Vomiting with constipation of the bowels, is a distinctive sign of hydrocephalus, a symptom not usually met with in other affections of the head. *Remedies, IN GENERAL: ACOX. ant. ars. BELL. bry. cin. con. dig. HELL. hyos. lach. mere. op. ph-ac. stram. sulph. tart. verat.*

CHRONIC HYDROCEPHALUS: *Ars. hell. sulph. tart.*

HYDROPHOBIA (a disease resulting from the bite of a rabid animal, characterized by dread of water, and the impossibility of swallowing fluids; even the sight or noise of water produces indescribable anxiety, convulsions, and madness). *Remedies, IN GENERAL: BELL. canth. hyos. lach. mere. stram.* Also, use a *warm vapor bath*, and other means to *promote profuse perspiration.*

PREVENTIVES (as): *Bell. lach. hydrophobine*, and the application of *dry heat at a distance*, in the following manner, viz.: Hold a red-hot iron or live coal directly over and as near the wound as can be borne without too great pain, or without burning the skin, having previously smeared the surface around the wound with a little oil, grease, soap, or saliva, which must be renewed whenever the skin becomes dry. Continue the action of the heat upon the wound until shuddering is produced, or for the space of an hour; and *carefully remove whatever exudes from the wound.*

HYDROPHOBIA SPURIOUS (dread of water). *Remedies, IN GENERAL: Am-c. calc. nitr-ac. sass. sep. sulph.*

HYDROPS (dropsy). See: DROPSY.

HYDROSARCA (anasarca). See: ANASARCA.

HYDROTHORAX (dropsy in the chest). *Diagnosis.* This disease is characterized by oppressed respiration, especially during motion, and when lying down; with anxiety, and sensation of suffocation, as from want of air. Also, short cough, dry skin, scanty and high-colored urine, weak and intermittent pulse, and as the disease progresses, œdema of the feet and lower extremities. Sometimes on motion, a fluctuation of the water in the chest may be heard by auscultation. In the latter stages of the disease there is often an impossibility of lying down on account of the oppression, and the patient is compelled to retain a sitting or standing posture. *Remedies, IN GENERAL: Am-c. aur. ars. bry. carb-u*

HYDROTHORAX :

HYSTERIA (a nervous disease, frequently dependent on some uterine irregularity). See: HYSTERICIS, HYPOCHONDRIASIS, and MIND.

HYSTERICIS (passio histeria, hysteric fits). *Diagnosis.* Attacks of hysteria, occurring in paroxysms, usually preceded by anxiety, weeping, great depression of spirits, shortness of breath, palpitation of the heart, and frequent discharge of pale watery urine. During the paroxysm there is frequently a variety of nervous phenomena; as spasms, hiccough, choking, alternate fits of laughter and crying, delirium, foaming at the mouth, spasmodic clenching of the jaws, &c. Relief generally ensues with eructations, followed by deep sighing and sobbing respiration. The attacks are often excited by mental emotions, especially in persons subject to hysteria. *Remedies, IN GENERAL:* Acon. amb. am-c. anac. Arn. ars. asa. Aur. bell. bry. calc. caus. cham. CocC. INTERMITTENT FEVER (fever and ague). *Diagnosis.*

Paroxysms of fever, usually commencing with a chill followed by heat, and terminating in sweat. The paroxysms usually occur every twenty-four hours (quotidian), or forty-eight hours (tertian), or seventy-two hours (quartan), and in some cases at intervals of seven days (octanæ). Sometimes the paroxysms occur twice within the above-named periods, and are called *double quotidian, tertian, or quartan, &c.* The period between the paroxysms is called the *apyrexia*, during which the patient is usually free from fever and suffering. *Remedies, IN GENERAL: Acon. alum. am-m. anac. ant. arn. LARYNGITIS (inflammation of the larynx). *Diagnosis.*

Acute Laryngitis bears a strong resemblance to Croup, but is distinguished from it by the constant disposition to hawk in order to clear the larynx, rather than the involuntary and violent cough attendant on croup. There is usually present, hoarseness, laborious respiration, extreme sensibility of the larynx to pressure, difficult and painful deglutition, fever, thirst, hard quick pulse, and in some cases spasmodic contraction of the larynx during the act of swallowing, which is sometimes attended with danger of immediate suffocation. Remedies, IN GENERAL: *Acon. bell. canth. carb-v. cham. dros. Hep. ipec. iod. lach. lact. laur. mere. nux-v. phos. puls. sen. Spong.*

- LOCK-JAW (trismus, tetanus). *Diagnosis.* An attack of this disease is generally preceded by a stiffness in the back of the neck, and lower jaw; sometimes there is difficult deglutition and oppressive tightness of the chest, with impeded respiration, previous to the setting in of spasm. As the disease advances the muscles become spasmodically contracted, and the jaws closely and firmly set (*trismus*). The body is generally drawn

LOCK-JAW :

backward (*opisthotonos*); or, as is sometimes the case, the body is bent forward (*emprosthotonos*); or to one side (*pleurosthotonos*); and finally, the head, trunk and extremities become spasmodically and rigidly extended; or drawn backward, forward, or on one side, as the case may be, with frightful distortions of the countenance. If the disease is not arrested, the spasms (which do not continue unremittingly,) become more and more severe, and death generally ensues about the fourth day from the commencement of spasms. *Remedies, IN GENERAL:* Acon. ang. arn. ars. MEASLES (morbilli). *Diagnosis*. In Measles, the premonitory symptoms, or stage of irritation, is ushered in by symptoms of a common cold or catarrh; with sneezing, short, dry cough, redness and lachrymation of the eyes,

MEASLES:

intolerance of light, fever, and sometimes headache. This stage of the disease lasts for three or four days, when an eruption of small red spots, of one or two lines in diameter, make their appearance; generally, on the face, neck, and arms first, and finally extend over the whole surface of the body. The second stage of the disease, or stage of florescence, also lasts for three or four days, with a greater or less degree of intensity of the above-named symptoms; when the eruption turns pale, and disappears with a bran-like desquamation of the epidermis, in the same order in which it sprang up. The last stage, or stage of desquamation, generally commences about the ninth or tenth day of the disease, and lasts for several days. This disease is characterized by critical perspiration, and urine, during the stage of desquamation; and in some cases by diarrhoea, which is considered a salutary crisis. The disease may be simple and benign, or complicated, malignant, and dangerous.

MILIARY FEVER (miliary eruption attended with fever).

MILIARY FEVER :

Diagnosis. An eruption of innumerable, transparent, white, purple, or scarlet vesicular elevations, appearing on all parts of the body, and especially on the chest. The eruption is preceded by fever, sour smelling perspiration, dry cough, anxiety, oppressed respiration, and frequently accompanied with sighing and moaning. The fever, and the preceding symptoms, usually subside after the eruption makes its appearance, but sometimes continue, and even increase in severity, after the eruption has come out. It usually terminates by a slight desquamation of the epidermis. *Remedies, IN GENERAL:* ACON. am-c. ant. arn. ars. bell. BRY. carb-v. caus. cham. coec. coff. dulc. hyos. IPEC. lach. led. MILK FEVER (fever attending the secretion of milk). *Diagnosis.* Chilliness, heat, and thirst ; with quick, weak, and variable pulse ; and in some cases, anxiety, oppressed respiration, headache, and pain in the back, which sometimes extends into the breasts. There is usually, in this disease, evening exacerbation, followed by perspiration, and amelioration towards morning. *Remedies, IN GENERAL :* ACON. arn. bell. BRY. cham. COFF. dulc. merc. puls. rhus.

MILK-CRUST (milk scab, tinea faciei ; occurring in infants). *Diagnosis.* An eruption of small whitish pustules in

MILK CRUST :

clusters on a red ground, appearing first on the face, cheeks, and forehead, and sometimes spreading over the whole surface of the body, accompanied by an intolerable itching. The pustules soon become yellow, and bursting, form into thin yellowish crusts or scabs, which in some cases are increased in thickness and extent so as nearly to cover the whole face as with a solid scab. The disease is sometimes attended with considerable swelling and inflammation. *Remedies, IN GENERAL*: Acon. ant. ars. bell. calc. cic. graph. hep. led. mere. mez. natr-m. Rhus. rhus-r. sass. sep. staph. sulph. VIOL-TR.

MILK-LEG (phlegmasia alba dolens). *Diagnosis*. A large, white, and rapidly formed leuco-phlegmatic and very painful swelling of the leg and thigh; sometimes extending over the whole pelvic region. This disease is analogous to puerperal fever, and has been denominated puerperal fever without the peritoneum. It usually happens within the first fortnight after parturition, and lasts from eight to fourteen days, and terminates by resolution, or the formation of lacteal abscesses, or death by gangrene. *Remedies, IN GENERAL*: Acon. ant. arn. ars. bell. MUCOUS FEVER. *Diagnosis.* The precursory symptoms of mucous fever (erethism of the mucous membrane of the intestinal canal), are, loss of appetite, flat slimy taste, white slimy coating of the tongue, pressure, fullness, and distension of the stomach, irregular evacuations, pale countenance, and other symptoms similar to the precursors of gastric fever, with which disease it is liable to be confounded, but is distinguished from it by the peculiar slimy coating of the tongue, and the characteristic secretion of mucus. As the disease progresses, the white mucous coating of the tongue becomes dark red at the tip and edges, indicative of a typhoid condition, although it sometimes remains white through the whole course of the disease. The patient frequently ejects from the stomach a white tasteless mucus, and the introduction of the least quantity of food is followed by tension, pressure, and distension of the stomach. The evacuations from the bowels consist principally of a tenacious, albuminous and thready mucus, mixed with undigested food, the coloring matter of bile, and pieces of worms. The pulse is usually soft, and seldom accelerated; the thirst moderate, although in some cases the patient has a great desire for drink. The urine is straw-colored, loamy, or flocculent, and deposits a whitish sediment. The skin is usually moist and warm, and the patient restless, peevish, languid, and weak. *Remedies, IN GENERAL:* Am. am-m. ant. ars. bry. cham. chin. cin. dulc. ign. ipec. Merc. mez. mur-v. phos. ph-ac. Puls. rhus. rhus-r. sep. sen. staph. sulph. sulph-ac. tart.

MUMPS (parotitis). *Diagnosis.* Inflammation and swelling of the parotid glands:—usually preceded by symptoms of a common cold, and sometimes attended with considerable fever, headache, and pain in the back and limbs. The swelling in severe cases extends to the throat and tonsils, sometimes increasing to that degree as to threaten suffocation. The disease is very liable, from a cold

MUMPS :

MYELITIS (inflammation of the spinal marrow). *Diagnosis.* Pain in some part or spot in the spinal column, which may be permanent, or returning at indefinite periods. The pain, which is aggravated by motion, and increased by pressure, is usually slight when the patient is at rest, and in some cases entirely wanting. The inflammation may be acute, or chronic, and in the latter case

MYELITIS :

it is sometimes difficult of recognition. It is generally associated with or productive of paralysis, usually of the lower extremities; yet sometimes of the upper, and in some cases affecting the internal organs. If the inflammation is situated in the cervical vertebræ, it frequently produces aphonia, dysphagia, and spasms of the pharynx and neck; if in the upper dorsal vertebræ, anxiety, oppressed respiration, palpitation of the heart, and sometimes opisthotonos; if the lower dorsal or lumbar vertebræ be the seat of the inflammation, it is frequently productive of paralytic or spasmodic affections of the abdomen or pelvic viscera. The seat of the disease may be detected by pressing on each single vertebra of the whole spinal column, or by passing a sponge wet with warm water along the spine, the affected part being sensitive to the pressure, or to the touch of the warm sponge. *Remedies, IN GENERAL: Acon. ars. bell. bry. chin-s. cocc. dig. dulc. ign. nux-v. puls. rhus. verat.*

See: under the head of their *Pathological name.*

NECROSIS (death of a bone). *Diagnosis.* In acute necrosis there is generally a widely diffused and extensive inflammation, and swelling of the part affected; attended with severe pain, fever, restlessness, and other phenomena of inflammatory action. As the disease progresses, supuration ensues, and the matter sooner or later finds its way to the surface, frequently forming a number of sinuses. An examination with a probe through an open-

NECROSIS:

ing discovers the bone to be the seat of the disease, which might otherwise be mistaken for an extensive phlegmonous abscess. In chronic necrosis the symptoms are less severe, and the disease much longer in coming to a crisis, and, in some cases, difficult of recognition. *Remedies, IN GENERAL:* Ars. Asa. bell. calc. con. euphorb. kreos. merc. phos. ph-ac. plumb. sabin. sec. sil. sulph. thuj.

Compare: BONES, ULCERATION, &c.

NEPHRALGIA (acute pain in the kidneys). See: KIDNEYS, PAINS, &c.

NEPHRITIS (inflammation of the kidneys). *Diagnosis.* Severe pressing, pungent pain in the region of the kidneys, following the course of the ureters to the bladder; with dysuria or strangury; and when both kidneys are affected (which is rarely the case), with an entire suppression of urine. The urine is hot and high-colored; and in the male subject, the testicle on the affected side is swollen, painful, and drawn up, and the foot on the same side is often numb, and sometimes spasmodically affected. Nausea, vomiting, severe colic, and tenesmus, usually accompany the disease. The pains are aggravated by motion, or by lying on the back or side affected. *Remedies, IN GENERAL:* Acon. alum. arn. bell. berb. Cann. CANTH. colch. cyc. dig. hep. kal. lye. merc. PEMPHIGUS (vesicular eruption, with or without fever).

Diagnosis. An eruption of vesicles, varying in size from
a split pea to a walnut, filled with a serous fluid, and
resembling blisters arising from a scald. The disease
may be attended with fever (acute pemphigus), which
generally lasts for several days, when the vesicles, hav-
ing arrived at maturity, burst, and form into scabs, of a
whitish or light brown color, or pass into painful and
protracted ulcerations. The disease, when unaccom-
panied by fever (chronic pemphigus), may continue for
months, or years, in which case new vesicles continue to
form successively as the older ones disappear. Remedies,

PERICARDITIS (inflammation of the pericardium). Diaq-

PERICARDITIS:

nosis. Burning, pricking, or shooting pain in the region of the heart, frequently extending into the shoulder, and sometimes into the arm. The pain is increased by deep inspiration, and by pressure over the precordial region. The respiration is accelerated, laborious, and often irregular, especially on moving. There is usually a high degree of inflammatory action, with accelerated and variable pulse, great anxiety, restlessness, and frequent fainting. The patient finds it difficult or impossible to lie on the left side, and generally obtains the greatest relief from lying on the back. *Remedies, IN GENERAL:* Acon. Arn. ars. bell. brom. Bry. canth. erot. kal. lach. phos. spig. sulph.

Compare with: CARDITIS; and the *Particular symptoms*, under their respective heads.

PERIPNEUMONIA (inflammation, including both the lungs and pleura). *Diagnosis* This disease is usually ushered in by a chill, followed by heat, fever, oppressed, short, hurried, and painful respiration: with a short, dry, and continuous cough, at the commencement, excited by deep inspiration, or by speaking. The cough is afterwards followed by expectoration of viscous, lumpy, and tenacious mucus, generally of a brownish or brick-dust color; in some cases, however, pure blood is expectorated, indicating a very high degree of inflammation. In this form of inflammation of the chest, both pain and oppression are present, the pain being more or less severe and of a stitching character, as the pleura or surface of the lungs is more or less the seat of inflammation. Heat, thirst, high-colored urine, hard, quick, wiry pulse, and other symptoms of inflammatory action are always present. *Remedies, IN GENERAL:* Acon. bell. Bry. chin. merc. phos. puls. sen. squill. sulph.

Compare with: PLEURISY, and PNEUMONIA.

PERITONITIS (inflammation of the peritoneum). *Diagnosis*

PERITONITIS:

Painful tumefaction and tension of the abdomen, with excessively painful sensibility to the touch or pressure. Heat, thirst, high-colored urine, small, quick, wiry pulse, and sometimes vomiting, obstinate constipation, and ischuria, are present, with other symptoms similar to those of enteritis. *Remedies.* IN GENERAL: ACON. ars. PHTHISIS (consumption). *Diagnosis*. In the early stage of the disease, the most prominent symptoms of pulmonary phthisis are, dry cough, oppressed respiration, shortness of breath, emaciation, greatly accelerated pulse, hectic fever, and burning in the palms of the hands and soles of the feet. As the disease advances, night-sweats supervene, the cough becomes more harassing, with expectoration of mucus, or pus, with increased emaciation, and prostration of strength. In the later stages of the disease, the bowels (which in the early stage of the disease are usually costive) generally become relaxed, and severe attacks of diarrhoea ensue, which, with cedematous swelling of the feet and lower extremities, are harbingers of approaching dissolution. *Remedies*, IN GENERAL: Acon. amb. am-c. am-m. arn. ars. bell. bry. NOTE.—For the *Sequelæ* of Pneumonia, in general: the principal remedies are: *Am-c. lach. Lyc. phos. SULPH.*

PODAGRA (gout in the feet). See: **ARTHRITIS.**

POISONS. When it is ascertained that poisonous substances have been taken into the stomach, we should immediately endeavor to cause their ejection by *vomiting*, or neutralize their effects by *antidotes*. Vomiting should be excited by drinking large quantities of tepid water, putting the finger down the throat, or by tickling the

POISONS:

throat with a feather; or by placing snuff or mustard mixed with salt upon the tongue; or by mixing a teaspoonful of powdered mustard and two teaspoonsful of salt in a tumbler of water, and let the patient drink it at a draught, and follow its administration by copious draughts of tepid water. If these means fail, or cannot be made use of, give injections of tobacco smoke.

The *Principal Antidotes*, most safely administered, where the kind of poison is unknown, are: *sugar and water*; or *white of eggs*—especially if there be violent pains in the stomach and bowels; or *strong coffee*, if the patient be dull, stupid, giddy, delirious, or raving; or *soap-water* in large quantities, where there is reason to suppose the poison to consist of *mineral or corrosive acids*, and the patient complains of a sour, burning, acrid taste, or acrid scalding heat in the mouth, throat, and stomach, with acute pains in the stomach and bowels. Soap-water should never be administered in case of poisoning by alkaline substances, such as *potass, soda, lime, &c.*

ACIDS (mineral or vegetable corrosive acids). Give: *Tepid soap-water* in large quantities; or a spoonful of *magnesia* in half a tumbler of water, and repeat it every time the vomiting is renewed; or give *wood ashes, soda, or alkalis* dissolved and administered in warm water. After the vomitings and pains have subsided, give mucilaginous drinks for several days.

ALCOHOL. Give: *Milk* and *mucilaginous drinks*; or dissolve three drops of *ammonia* in a gill of sugar-water, and give a teaspoonful once in 15 minutes; if these fail, give *strong coffee*, or *nux-v.*

ALKALIES. Give: *Acids.* Mix two tablespoonsful of *vinegar* in a tumbler of water, and give a tablespoonful once in 10 minutes; or give *lemon-juice, vegetable acids, and mucilaginous drinks and injections.*

AMMONIA, Salts of Ammonia, Spirits of Sal Ammoniac, Potash, Pearlash, and Soda. Give: *Acids.* See: **ALKALIES.**

ALUM. Give: *Tepid soap-water*; or *sugar-water*, until copious vomiting is produced: afterwards—*puls.*, or *verat.*

ANTIMONY. Give: *Strong coffee*; or a decoction of *gall-nuts*; or *oak-bark*; and mucilaginous drinks.

ARSENIC. Give: *Soap-water* in large quantities; or *white of eggs* in water; or *sugar and water*; or *milk* in large

POISONS (arsenic):

quantities; or the *liquid acetate of iron*; or *iron rust*, in a solution of sugar-water; or *fresh-drawn blood*, in proportions of two spoonful of blood to each grain of arsenic.

BARYTA. Give: *Glauber salts* dissolved in vinegar, and diluted with water; afterwards—*camphor* by olfaction.

BITTER ALMONDS. Give: *Strong coffee*, in large quantities; or *liquid ammonia*, by gentle olfaction; or mix a few drops of *ammonia* in a tumbler of water, and give a tea-spoonful every 15 minutes.

CAMPHOR. Give: *Strong coffee*, in large quantities, until vomiting is produced; afterwards—*op.* every hour until the symptoms subside.

CANTHARIDES. Give: *White of eggs* in tepid water, and mucilaginous drinks; and at the same time let the patient inhale *camphor* by olfaction, and bathe the parts which are most affected with a solution of the spirits of camphor.

CATERPILLARS. For inflammations caused by the hairs of caterpillars getting into the skin, apply bandages saturated with the *spirits of camphor*.

COBALT. Give: *Soap-water*; or *white of eggs*; or *sugar and water*; or *milk* in large quantities.

COPPER, Verdigris (acetate of copper). Give: *White of eggs*; or *sugar*, either with or without water; also—*milk*, and *mucilaginous drinks*.

CORROSIVE SUBLIMATE. Give: *White of eggs*; or *sugar-water*; or *milk* in large quantities; or *wheat-flour starch* dissolved or boiled in water. The *white of eggs* is the *principal remedy*, and may be given in alternation with *sugar-water*.

GAS, generated by burning CHARCOAL, or LIMESTONE; FIXED AIR, CHOKe DAMP (carbonic acid gas). Employ: *Vinegar*, by applying it to the nose and mouth, and by bathing and rubbing with the same. If a state of asphyxia has been produced, use the means recommended for asphyxia from gases and noxious vapors. For gas generated in deep privies, or from the offals of animals (sulphuretted hydrogen gas), *chloride of lime* is the best antidote. Where such gas has been inhaled, dip a sponge in a weak solution of chloride of lime, and hold it before the nose and mouth of the patient. If this remedy is not at hand, use *vinegar and water* in equal

POISONS (Gas):

parts, by sprinkling the face, and holding a sponge dipped in the same before the mouth and nose of the patient, and occasionally moisten the mouth with the same.

GLANDERS. For the effects resulting from contact with the glanders of horses, give: *Phosphoric acid*. If this fail, give: *Ars.*—afterwards *calc.*, or *sulph.* The dose is not to be repeated while the patient improves. For glanders in horses, *Acon.*, *ars.*, and *rhus.* have been recommended.

HARTSHORN (ammonia, cornu cervi). Give: *Acids*. See: **ALKALIES.**

HONEY (POISONOUS). Give: *Camphor* by olfaction, and at the same time, *strong hot coffee*.

INSECTS (POISONOUS). For the bites and stings of poisonous insects, bathe the part injured or most affected with *camphor*; or, if practicable, hold the injured part to the fire, until the pain ceases; and give: *Acon. Arn. bell. calad.* or *camph.*, in accordance with the *particular symptoms*.

IODINE. Give: *Starch-water*, *starch-paste*, or *wheat-flour paste*, and *mucilaginous drinks*.

LEAD. Give: *Epsom salts* (sulphate of magnesia), dissolved in warm water, and drank freely; or *white of eggs*, or *soap-water*, or *milk*, and *mucilaginous drinks*. After the salts, or soap-water, give mucilaginous injections.

LIVER OF SULPHUR. Give: *Vinegar and water*; or *lemon-juice and water*; or *oily and mucilaginous drinks and injections*.

LUNAR CAUSTIC (nitrate of silver). Give: *Common table salt* dissolved in water, and drank in large quantities; afterwards—*mucilaginous drinks*.

MEZEREON. Let the patient *inhale spirits of camphor* by olfaction; afterwards give: *Bry. merc.* or *rhus.*, according to the remaining symptoms.

MURIATIC ACID (spirits of salt). Give: *Soap-water*; or *magnesia* dissolved in water; or *powdered chalk* in water; afterwards—*bry.* and *mucilaginous drinks*. Persons exposed to the vapor of this acid should smoke tobacco, or take a piece of sugar saturated with rum, brandy, or alcohol, in the mouth.

MUSCLES, and POISONOUS FISH. Give: *Powdered charcoal* in *sugar-water*, and let the patient inhale *camphor*, by

POISONS (muscles) :

olfaction; afterwards give—*coffee*. If these fail to afford relief, give *sugar-water in large quantities*; and if this proves ineffectual, administer a *weak solution of vinegar and water*.

MUSHROOMS (POISONOUS). Provoke vomiting by copious draughts of *cold water*, and give *charcoal mixed with olive oil*. If these means fail, let the patient gently inhale *hartshorn*; and for the remaining symptoms give *coffee*.

NITRATE OF POTASH (salt petre). See: SALT PETRE.

NITRATE OF SILVER (lunar caustic). See: LUNAR CAUSTIC.

NITRIC ACID (aqua fortis). See: ACIDS.

OPIUM, or LAUDANUM. Give: *Strong coffee*; or *vinegar and water*; afterwards—Bell., camph., *ipeca.*, *merc.*, or *nux-v.*, according to the remaining symptoms.

PHOSPHORUS. Excite vomiting as quickly as possible; afterwards, give *strong coffee*; and after this, a spoonful of *magnesia*; and after the *magnesia nux-v.* may be serviceable.

PINK (spigelia). Give: *Camphor by olfaction*, and *strong coffee*. For the consecutive effects give—*Merc.*

POISON OF FAT. Give: *Acids*, such as *lemon-juice*, or *vinegar and water*, and occasionally a cup of *strong black tea*, or *coffee*. If the patient gets tired of the acids give *sugar* from time to time in alternation with the acids. If the bowels are constipated, use mucilaginous injections; if they produce no alvine evacuations, give *bry.*, and afterwards, *phosphoric acid*.

PRUSSIC ACID (hydrocyanic acid). Give: *Strong coffee* in large quantities, and let the patient gently inhale the *spirits of hartshorn*; or mix a drop of hartshorn in half a tumbler of water, and give a teaspoonful of the solution every five or ten minutes. If hartshorn is not at hand, let the patient smell of camphor, or vinegar. Also, give *coffee* in injections.

RHUBARB (rheum). Give: *Cham.*, *coloc.*, *merc.*, *nux-v.*, or *puls.*, in accordance with the symptoms.

SAFFRON. Give: *Coffee* until it excites vomiting; afterwards, *op.*, every hour, until all the symptoms disappear.

SALT PETRE (nitrate of potash). Give: *Melted fresh butter in tepid water*, until vomiting is produced; afterwards, *mucilaginous drinks* in large quantities.

POISONS :

SECALE CORNUTUM (ergot, spurred rye). Bruise *garden nightshade* (*solanum nigrum*) in cold water, and pour hot water upon it, and let the patient inhale the vapor.

STRAMONIUM (thorn-apple). Excite vomiting as speedily as possible, and give: *Strong coffee*; or *vinegar*; or *lemon-juice*, in large quantities.

SULPHATES of COPPER, IRON, and ZINC. Give: *Tepid sugar-water*, or *white of eggs in water*, until vomiting is produced; afterwards, mucilaginous drinks.

SULPHURIC ACID (oil of vitriol). See: **ACIDS.**

SULPHUR. For the affections caused by the *vapor of sulphur*, give: *Puls.* For chronic affections from abuse of sulphur, give: *Chin. marc. nux-v. puls. sep. sil.*

SUMACH; or POISON IVY. For the inflammatory eruption caused by contact with either of these vegetables, give: *Bell.*, or *bry.*, and bathe the part affected with salt and water, or a *decoction of bean leaves.*

TARTAR EMETIC (tartrate of antimony and potash). Give: *Strong coffee*; or a decoction of *gall nuts*; or *oak bark*; and mucilaginous drinks.

TIN. Give: *White of eggs*; or *sugar*; or *milk*; or *sugar-water*; and afterwards, *puls.*

TOADS. If the poison of toads has been taken into the stomach, give: *powdered charcoal in milk*, or *oil.* If dangerous symptoms appear, let the patient inhale the *spirits of nitre* by olfaction; and afterwards give: *Ars.*

VEGETABLE POISONS. The *olfaction of camphor*, or the use of *strong coffee*, are the principal antidotes for *vegetable poisons in general.* *Narcotic plants* require *strong coffee*, or *vinegar* diluted with water. *Corrosive vegetable poisons*, or those which produce violent pains in the stomach and bowels, require: *Soap-water*; or *milk*; and afterwards, mucilaginous drinks.

VENOMOUS BITES, or STINGS. See: **BITES; HYDROPHOBIA; and INSECTS (POISONOUS).**

VERDIGRIS (acetate of copper). See: **COPPER.**

VITRIOL.—*White, Blue, or Green.* Give: *Tepid sugar-water* in large quantities; or *white of eggs in water*; and after copious vomiting has been produced, give mucilaginous drinks.

NOTE.—The principal items in the foregoing article on "Poisons" have been collected chiefly from the writings of the distinguished Dr. Constantine Hering, of Philadelphia.

- PROSOPALGIA (neuralgic pains in the face: tic doreux).
Diagnosis. Paroxysms of distressing and sometimes
very violent pains in the facial nerves, particularly in
the region of the zygomatic process; frequently extend-
ing to all parts of the face, and sometimes into the ears,
the orbits of the eyes, and head. In severe cases there
is often a spasmodic distortion of the facial muscles.
The attacks sometimes appear periodically, and are of
indefinite duration. *Remedies, IN GENERAL: ACON. agar.*

RENAL CALCULUS (stone in the kidneys, nephritic calculi). *Diagnosis*. Renal calculus is productive of permanent or periodic pains, and pressure, in the region of the kidneys, with more or less disturbance of the urinary secretion, and severe attacks of colic and vomiting. Nephritic colic is distinguished by the violence and sudden occurrence of the pains in the region of the kidneys or bladder, spreading over the whole abdomen, and accompanied by vomiting and crying, and affecting sympathetically the testicle and leg of the side diseased. In addition to the above-named symptoms, it is sometimes productive of severe spasms, and especially after the stone has been dislodged, and during its passage through the ureters, when the pains are often of a most excruciating character. *Remedies*. RHEUMATISM (inflammation of the fibrous tissue of the body, either acute or chronic). *Diagnosis.* Pains in the fibrous, muscular, or membranous parts of the body, generally attended with rigidity of the part affected, and aggravation of the pains on motion; and characterized by sensibility to the changes of the weather, and atmospheric influence. It may appear with fever (acute rheumatism), or without fever (chronic rheumatism); it may be local, or wandering from one part of the body to another; accompanied with swelling, heat, and redness of the skin—or without swelling, heat, or discoloration of the skin; sometimes the pains are relieved by hot, and sometimes by cold applications, and *vice versa*. The pains are usually worse during the night, but sometimes worse during the day. In some cases the pains are relieved by motion, and in others by rest. In short, it is a disease which presents such a variety of phases, and contrariety of symptoms, as makes it difficult to give any definite diagnosis; yet the disease is one so frequently occurring, and so well known, as to render any particular description unnecessary. *Remedies, IN GENERAL:* Acon. ant. arn. ars. l. l. Bry. calc-ph. camph. canth. caus. cham.

SCABIES (itch, psora). See: **ITCH**.

SCALDS (injuries from hot fluids). See: **BURNS**, &c.

SCALD HEAD (tinea capitis, crusta lactea, ringworm of the scalp). *Diagnosis.* Eruption of little pustules in the hairy parts of the head, sometimes appearing in circular patches, and attended with violent itching and the secretion of a viscous, fetid matter, which forms into scabs. The eruption usually becomes confluent, and the patches uniting with each other, form into thick, hard, and extensive incrustations. The disease is communicable through the use of the same comb, brush, or towel used by the patient; and the contagion should be carefully guarded against among children. *Remedies, IN GENERAL: Ars. BAR-c. brom. calc. cic. dulc. graph. Hep. lyc. ol. and. ol-jec. phos. Ruus. sass. sep. STAPH. sulph. vinc.*

MOIST (humid): *Ars. bar-c. bar-m. calc. cic. dulc. graph. hep. Lyc. oleand. Rhus. sep. STAPH. sulph. vine.*

Compare with: ERUPTIONS; and in the selection of a remedy special reference should be had to the *constitutional symptoms* of the patient, as the disease usually has its origin in a scrofulous or some other constitutional dyscrasia.

SCARLATINA (scarlet fever). *Diagnosis.* Fever, with greatly accelerated pulse, attended with soreness and pain in the throat; scarlet redness of the skin, particularly in large, smooth, and glassy spots (genuine scarlet fever); or military-like eruption, in scarlet patches of an indefinite size (scarlatina). The eruption generally appears within one or two days from the commencement of the attack, and usually continues for five or six days, when it disappears with desquamation of the epidermis. Such are the usual pathognomonic symptoms; yet the disease affords many anomalies, and is one of the most deceitful of all eruptive diseases. It is of an erysipelatous character, and sometimes very malignant; and is subject to metastasis to the brain, ears, eyes, &c.; and is very apt to be followed by dropsical accumulations. *Remedies, IN GENERAL:* *Acon. am-c. Arn. ars. bar-c. Bell. bry. calc. camph. canth. carb-v. caus. cham. coff. con. croc. dulc. euphorb. hep. hyos. ipec. lach. merc. nitr-ac. phos. ph-ac. rhus. saug. stram. sulph. zinc.*

SLEEP-WALKING (sommambulism). Remedies, IN GENERAL : Alum. bry. *natr-m.* op. phos. rheum. sil. sulph.

SMALL-POX (variola). *Diagnosis.* The attack commences with chills, followed by heat, fever, lassitude, headache, nausea and vomiting, catarrhal symptoms, pain in the back and loins, oppression at the chest, fetid breath, and frequently, with pain in the pit of the stomach, which is increased by pressure. At the close of the third day from the commencement of the attack, small, red, hard, and pointed elevations appear in the skin, and continue to enlarge during the next three days, forming into pustules depressed in the centre and containing a semi

SMALL-POX:

transparent fluid; the pustules stand suppurating for three days more, during which time the lymph in the pustules becomes converted into pus, which commences to dry up and form into scabs on the seventh day of the eruption, and the eleventh of the disease. The eruptive stage of the disease lasts three days, during which time new pustules continue to break out; and as each pustule or pock runs through its regular course, observing the same order and measure of time, the general desiccation does not occur until the fourteenth day of the disease. The pustules make their appearance first on the face and scalp; the next day on the hands, arms, and neck; and the third day on the feet and other parts of the body. The pustules sometimes run into each other (confluent small-pox), and form large continuous suppurating surfaces. *Remedies, IN GENERAL: Acon. am-m. ant. arn. ars. bell. bry. camph. canth. carb-v. cham. chin. cic. clem. cocc. coff. hyos. ipec. MERC. nitr-ac. op. phos. puls. Rhus. sil. stram. sulph. TART. thuj. vaccinin.*

MALIGNANT (black): *Ant. Ars. bell. bry. CARB-V. hyos kreos. lach. mur-ac. rhus. sec. sep. sil. tart.*

NOTE.—For the *precursory symptoms* of small-pox consult: *ACON. ant. ars. bell. Bry. cham. coff. ipec. merc. Rhus. and stram.* During the *eruptive stage*:—*Ant. ars. bell. bry. cham. merc. rhus. SULPH. stram. TART.* During the *suppurative period*:—*Bell. cham. MERC. rhus. sulph. tart.* And during the *period of desiccation*:—*Acon. bell. bry. cham. merc. puls. and sulph.* The remedies, however, are always to be selected in conformity with the symptoms, which see—under their respective heads.

In the treatment of this disease, *cool fresh air, cool drinks, and cleanliness,* are valuable auxiliaries. As soon as the eruption appears, the room of the patient should be kept dark, in order to prevent the disfiguration of parts exposed to the light.

VACCININ enjoys the reputation of being eminently useful in the treatment of small-pox; and is said to possess the property of "*altering the character of the pustules, so that the usual pits or scarred depressions are completely obviated.*"

Compare: ABDOMEN DISTENSION, and FULLNESS.

TYPHUS FEVER (febris nervosa). *Diagnosis.* Slight chills followed by heat, lassitude, giddiness, and in some cases trembling and fits of fainting, are the usual precursors of typhus fever. The head and nervous system seem particularly affected; hence, drowsiness, stupor, and delirium are frequently present, and in some cases, spasms and convulsions. The pulse is often very changeable—sometimes full and slow, but usually quick, soft, small, and weak. The pulse does not harmonize with the respiration as in inflammatory fevers. The tongue is usually thickly coated, and the mouth parched and dry, with but little thirst. The skin is usually hot and dry,

TYPHUS FEVER :

but in some cases, the parched and burning skin is succeeded by profuse, clammy, and debilitating perspiration. The urine is sometimes red, and sometimes pale, or brown, or bloody, or turbid, or cloudy, and sometimes deposits a copious sediment. In short, changeability and discordance of symptoms, with slow fever, nervous affections, and great prostration, are the predominant characteristics of Typhus Fever; the symptoms varying according to the virulence or the variety of the disease, or as the cerebral, abdominal, or pulmonary symptoms predominate. *Remedies, IN GENERAL:* Acon. am-c. arn. ars. bar-c. YELLOW FEVER (typhus icterodes). *Diagnosis.* The attack is usually preceded by great lassitude, headache, giddiness, and faintness; which is soon succeeded by chilliness, and great anxiety; followed by excessive thirst, violent vomiting and purging, first of bilious, then of blackish fetid matters. The urine is offensive, scanty, or suppressed. The breathing hurried and laborious, and sometimes attended with a gasping for air, or deep sighing respiration. The tongue is usually coated white at the commencement of the attack, and is sometimes moist, but more frequently dry; and as the disease advances it becomes parched, red, or brownish; and in the latter stages of the disease, black and shrunk. The skin and eyes are of a yellow tinge—the restlessness and anxiety excessive—the eyes glassy and hollow—the head confused, and frequently there is violent delirium. The pulse is subject to great variations: sometimes it is full and strong, and sometimes small, weak, irregular, or intermittent. As the disease advances unchecked, the symptoms become more violent—the vomiting and purg-

YELLOW FEVER:

ing incessant—the prostration excessive—the features contracted—the pulse sinks—the evacuations become black, or bloody—purple spots make their appearance—and death closes the scene. Remedies, suggested, or recommended to be selected, in accordance with the predominant symptoms: *Acon.*? *arn.*? *ars.*? *bry.*? *carb-v.*? *chin.*? *crotal.* *hydr-ac.*? *ipcc.*? *merc.*? *mur-ac.*? *nux-v.*? *phos.*? *tart. verat.*?

YOUNG GIRLS (affections of); at, or near the age of PUBERTY.

For other affections at, or near the age of puberty, See: their *Pathological name.*

ZONA (herpes zoster, shingles). *Diagnosis.* Clusters of vesicles, forming in the shape of a belt or zone—most commonly at the waist, yet sometimes on other parts of the body. The eruption usually extends about half way around the body, in the form of a belt, and attended with itching, smarting, biting, pricking, or burning pains. Acute attacks of this disease are attended with fever, nausea, headache, foul tongue, restlessness, and accelerated pulse. The disease in its chronic form is less severe, but more obstinate and difficult of cure. *Remedies, IN GENERAL:* *Ars.* *bry.* *caus.* *GRAPH.* *MERC.* *natr.* *puls.* *RHUS.* *sel.* *sil.* *sulph.* *tart.*
