

Can 'Maggotnum' be the Future Remedy for the Breast Cancers!

Abstract: Auto-immunity can be raised through Homoeopathy. Auto-immunity helps in building antibodies, fight cancer cells and resolve tumours.

THE STORY OF A LONG TERM SURVIVAL OF BREAST CANCER

Late (Mrs) AC, around 80 years female, was an old but sturdy widow, had five daughters and one son. They were all well-settled, either in Mumbai or abroad. She was staying here in India all alone. One of her daughters who would visit regularly, kept one *Aaya* and sometimes a nurse to take care of her. Her only son stayed in USA with his family. Patient developed a nodular growth in her left breast, which she didn't disclose to anyone but would apply *Belladonna plaster* on it. Gradually as the nodule grew, it started to bother her. She told this to some relative who consulted a Doctor. On examination the doctor found some wound with a nodule in that breast. Her daughters were informed about the malady and the patient was investigated thoroughly.

Mammography was done on 8/01/2007 which revealed a long irregular ulcerative skin lesion with surrounding skin thickening and nipple retraction in left breast medially with left axillary lymphadenopathy.

It was a suspicious malignant lesion therefore USG guided FNAC was performed from the enlarged axillary node for cytological evaluation. Cytology Report, dated 9/01/2007, revealed Left Breast-Ductal Carcinoma. At this stage, other doctors were also consulted, who found the patient to be unfit for surgery, radiation or chemotherapy, as she was very old and regional metastasis had already taken place. The relatives had no other option except to go for

Homoeopathy and she was brought to my clinic. I saw the patient on 13/01/2007. There was an ulcerative lesion on the left breast, which was bleeding excessively. History revealed the patient was suffering from osteoarthritis and has been operated on the left knee for a crack. After that she developed low blood pressure and low blood sugar levels. She suffered from occasional nausea, vomiting, spondylitis and acidity for which she was taking allopathic medication since 15 years.

The patient was warm and the aggravations were in form of suffocating attacks, particularly during sleep. She was loquacious and religious. I prescribed *Lachesis* 30/2 doses. That only gave some palliation, the look of the wound remained same; gangrenous look with black pigmentation so was the nodule. She was still applying the *Belladonna Plaster* on that. According to her that was giving her relief! However, I discussed this case with my husband, Dr Mirza Anwer Baig

HIS ANALYSIS

- Painless pathology (in the beginning)
- Fixed ideas (*Belladonna Plaster* gives relief).
- Black pigmentations were of *Belladonna Plaster's* not of gangrene
- Aggravation during sleep.

He suggested *Opium*. *Opium* 30/3 doses were given in first 24 hours, on 20/01/2007, then morning-evening for 3 more days. Patient's mental condition improved and she developed faith in Homoeopathy.

FOLLOW UP

27/01/2007, wound started showing signs of

healing, but the patient was still applying *Belladonna Plaster*. Difficult breathing spells during sleep were almost gone to nil. Now knee pain Lt started bothering her (old symptom). She was kept on *Opium 6*, morning and evening for a long period with *Thuja 200*, single dose as an intercurrent. In the meantime, her daughters, started visiting her. Each of them would then consult other specialist and also used to discuss with us about her fate.

The specialists explained that she was not going to live long, may be six months or even less. Some suggested chemotherapy and some radiation but no one could opine about her prognosis. Her daughters wanted to give her best possible treatment and so they consulted other alternative healers as well, one after another and therefore we lost proper link for some period.

As the saying goes "too many cooks spoil the broth" so happened here. She developed a serious complications of lungs and was hospitalized for some period. and was then discharged as a hopeless case, advising a peaceful death at home! We were again called in, in October 2007. She was in a very distressed condition with symptoms of advancing hydrothorax. Remedies which helped as clinical, miasmatic and intercurrent was *Nux-v*, *Sulphur*, *Conium*, etc.

Surprisingly as the clinical condition of the patient improved, her wound turned dirtier with maggots appearing inside that breast. Her daughters were very upset but since there was no other option, they continued the Homoeopathic treatment. Patient's complaints were: Sleep not sufficient, constipation, appetite wanting.

At this stage Dr Baig decided to do an experiment and explained them about that. The experiment : to prepare medicine from those maggots on the basis of auto-immune therapy. He told them the way how they can collect those maggots in a bottle, which they did. After making the Mother Tincture from them he kept that in a cool and dry place to bland. After few

days he started preparing different dilutions out of these maggots and named them 'Maggotnum'.

On 3/11/2007, few doses of *Maggotnum 1X*, 8 hourly were given to her. After that she developed fever with chill, for which patient took some *Crocina* tablets. But fever didn't go and remained for few days. After fever was gone no other signs or symptoms were observed. *Maggotnum 1X* was repeated for few more days, after which she developed some painful discharges from the wound and that's all! But after that, the condition kept on improving in every respect. There was no oozing of blood, breathing was better, sleep was better, appetite improved and the bowels were clear. Axillary nodule which was palpable earlier was not palpable. We didn't give any medicine thereafter but unfortunately her elder daughter who was staying in Mumbai and visited her regularly, herself suffered with cancer of liver, and died while undergoing surgical procedures at the Lilavati hospital. She was around 60 years old. This came as a shock to the patient and triggered her ailments with pain in the long bones, aggravated during night. The healed ulcer started oozing again with bloody discharges and some respiratory symptoms. This time some clinical medicines were tried but nothing worked to satisfactory mark. These medicines were *Ignatia 200*/one dose, 10/04/2008, *Angustra*, *Nosode II*, *Nitric-acid Lachesis*, *Aurum-met* as per the symptoms. Finally *Maggotnum 3X* and in its ³ molecular dilution (*Nosode XI*) stabilized the case again and thereafter she led a symptom free life without any complication for around a year or so. She died peacefully somewhere in the month of October 2009. At the time of her death she had no complaints and was happy and cheerful offering prayers.

³ Molecular dilution is Dr Baig's another find; it's in minus milisimal scale.
