

Carcinosin: the Complete Rubrics?

Edited and introduced
by Francis Treuherz

Introduction

The following list comprises all the rubrics for *Carcinosin* in the computer programme MacRepertory™ in the new version produced by Roger van Zandvoort in Holland, as the *Complete Repertory*. Included are the same authorities as the compilers of the *Synthetic Repertory*, Barthel and Klunker, and *Kent's Repertorium Generale*, Künzli, in addition to many other sources. It is timely to consider these rubrics now as the late DM Foubister's work appears in book form for the first time as *Tutorials in Homœopathy*, (Beaconsfield 1989) to be reviewed in a future issue of this Journal. Readers may like to compare this list with the essays in the book, and with their own experience, and to send in their additions by the end of August 1990, for a possible revision.
