

patient from sufferings in no time and at the same time patients money too is saved, for by far less expenses are needed in this treatment.

A CASE OF CATARACT AND PANOPHTHALMITIS.

LATE DR. M. L. SIRCAR, M. D.

Patient, a Hindu female, aged 55, came under treatment on the 25th Nov. 1897. There was cataract in both eyes, in the left it was fully formed and there was no vision. There was some dim vision in the right, but there was inflammation of the whole ball with considerable pain. I gave her *Phos. 6x*, pilules, one for a dose, twice a day. In three days the pain in the inflamed eye was considerably less, in a week more it was nearly gone, and she could see better with it. In a month the inflammation altogether disappeared, and much useful vision was restored. Further progress of her case could not be observed, as she went away to her native village, and no report has since been received.
