

# A Case of Varicose Ulcer

M/38 came to me a year ago with Hypertension, which was treated by Homoeopathy.

When his wife was not conceiving, his investigation revealed he had mild varicocele with low sperm count. This increased after homeopathic treatment. It was only recently that he developed Varicose ulcer.

## RECENT COMPLAINTS

Varicose ulcer on Left Leg.

Painless, bluish, Black base.

Discharge: Offensive smell.

Swelling on leg. > elevating leg.

## PHYSICAL GENERALS

APPETITE: Good

THERMALS: Chilly, but desires fan always

THIRST: Thirst less

APPEARANCE: Fat, chubby, tall, Stoop shouldered,

MIND:

Reserved. Does not talk of problem until asked

- He has become very careless about himself and his health. His wife says, nowadays, he is not bothered of the family.
- Even when married just 2 years he did not enjoy parties or family functions.
- He has become very slow in his work.
- He is running the family business, where the job is sedentary.
- He has no hobbies.
- His wife complained that he takes no-responsibility at all.
- Now married 4 years, yet not interested to have

own family (children).

- His wife complains that she has to force him even to take the treatment
- Even in the family business, his father meets people and does all the marketing job. Patient just sits in the office. He is not even capable of walking upto a new customer.

ANALYSIS: In any given case we need to understand:

- \* Physical makeup
- \* Mental makeup
- \* General makeup

## PHYSICAL MAKEUP

Build - Fat, Flabby, stoop shoulder

Face/feature - Vital face {Happy go-lucky}

Hair - Thin, Straight

Expression - Talk indisposed to

Will - Negative, Timid

Morals - Non-conscientious

Intellect - Nothing particular

Speed - Slowness

Speech - Indifference

Emotions - Not marked

Peculiar behavior - None

Attachment - None

Sensitivity - No particular sensitivity

Thirst - Thirstless

Thermals - Chilly

## Causative Factors

Nothing significant.....

## Journey of disease:A

{Dr Vijaykar's chart of suppression}

Varicose ulcer I layer Ectoderm Syphilis

Hypertension IV layer Mesoderm Psora

Varicocele V layer Endocrine.....Sycosis

**KNOWLEDGE OF MIASM:**

Miasma are seen in

Genetic trait: his behaviour - indifference attitude towards life and family, no love for life.

Diseases..... syphilitic

**CASE ANALYSIS**

Timidity +Talk indisposed to + Slowness + Chilly + Varicose vein ulcer + Discharge offensive + Ulcer bluish, painless

**Materia Medica knowledge**

- *Arsenic* was ruled out as the patient was not at all mentally and physically restless, no anxiety.
- *Lachesis* was ruled out as patient was absolutely chilly.
- Difference between *Calcarea* and *Carbons*.
  1. *Calcareas* and all *Carbons* are non-conscientious.
  2. Anxiety health: present in all *Calcareas* but not any *Carbons*.
  3. Mental state of *Calc* is insecurity, desires touch and slowness.....In *Carbons* unhappy, unfortunate and dejected....They go into stasis, inert and torpor.
  4. Sensitivity -- *Calc* are impressionable and *Carbons* exhibit no excitement even for pleasant things.

*Carbo-veg* 200 I dose given

**FOLLOW UP**

In this case the Hypertension which was the Psoric complaint was wrongly suppressed by homeopathic remedy and he developed varicocele. This too was better with homeopathic treatment and his sycotic disease was suppressed to syphilitic miasm.

After giving *Carbo-veg*, first his varicose ulcer which is in first layer dissappeared and he got severe pain in his testes. This was better without any repetition of dose and his blood pressure increased. His systolic was high but diastolic was normal. This also indicates that blood pressure is psoric. After almost 8 months he developed fever with cold. The best result was his wife got baby

boy after 2 years of the right Homeopathic treatment.

**PATHO-PHYSIOLOGY OF CARBON GROUP:**

- Known for its inertness- slow and sluggish cellular activity
- Reducing agent – it removes oxygen from tissue so deficiency of oxygen leads to air hunger
- Act on metabolism anaerobically
- Accumulation of pyruvic acid so oedema and puffiness in the tissues
- Affects the venous system – veins are engorged
- **MIND:**

Impatience / impetuous

Memory / Active

Dreams vivid / fantastic / visionary / of business

Foolish Mirth

**Picture of syphilitic *Carbo-veg* :**

Answers, slowly

Confidence, want of self

Dullness, sluggishness, difficulty of thinking

Imbecility

Indifference-apathy/duties to/everything to/family to his joy, and suffering to

Indolence, aversion to work.

Senses, dull blunted

Sit, inclination to

Slowness

Mannish habit of girls

Lack of reaction

Work, aversion to mental impossible.

**Basic Innate Nature and *Carbo-veg***

Obstinate, headstrong

Affectionate

Passionate

Flatterer

Avarice: generosity towards strangers, avarice as regards his family.

Music aggravates

Unfortunate feels

Timidity: bashful, appearing in public  
Embarrassment in society

well of breath. Profound apathy towards life. No emotion.

**CONCLUSION**

This case is an example of how a partial similitum can give partial change from **higher layer (hypertension) to lower layer (varicose ulcer)**

- Capillary hemorrhage
- Localized ulceration
- Hypoxia
- Blueness (cyanosis)
- Tissue death, offensiveness

**CARBO-VEG = CHARCOAL**

**Preparation**

Made by igniting a pile of wood, covered with a thick layer of soil combustion without oxygen under 300-400 ° C – production of volatile compound.

**Key Note**

Imperfect oxidation leads to disintegration of the tissue. It has disinfectant, deodorant, antiseptic properties; sluggishness, torpor, lazy.

**Constitution: Two Types:**

1. Lot of heat—Energy—Excessive viability
2. Lack of Oxygen—Excessive prostration / Pulse weak / Face sunken / Pale or bluish coldness of skin as

**Picture of Psoric Carbo-veg**

Business desire for  
Ailments from debauchery, sexual excess  
Dipsomania, alcoholism  
Excitement, excitable hurried as if  
Extravagance  
Exaltation of fancies  
Hurry, haste occupation in  
Ideas, abundant, clearness of mind  
BUT

Worsens the case from less important **miasm (psora)** to more important **miasm (syphilis)**

Introduction...Organon of medicine .... The local symptom which had been established by nature on the skin for the relief of the internal disease, thus renewing the more dangerous internal malady and by this repulsion of local symptom compelling the vital force to effect a transference of a worse form of morbid action to other and more important parts; the patient became affected with dangerous disease...etc, in place of the repelled local disease. This para gives a concrete understanding of how the transfer of disease takes place.
