

Comparision-Various Mental Facets of *Kali*

INTER - PERSONAL RELATIONSHIP "BREAK"

Pulsatilla : Will try to prevent a rupture as IPR (Interpersonal Relationship) is like O₂ to *Pulsatilla* the leech.

Lycopodium : Will employ wit for conciliation and will try to keep his dignity through non-rupture. Rupture, for the *Lyco*, amounts to defeat. However, *Lyco* lacks the sweetness of *Pulsatilla*.

Ars-alb : A continuous, critical and censorious harping leads to severing of relations with those not performing to his standards.

Nat-mur : Although there is an internal need for unconditional love, *Nat-m* will cut off relations out of hurt feelings; to forget or to forgive is difficult; she will add more salt and make the IPR complex and irreversible.

Sulphur : Quick to quarrel but equally quick to forgive and make up and hence there is no real falling out.

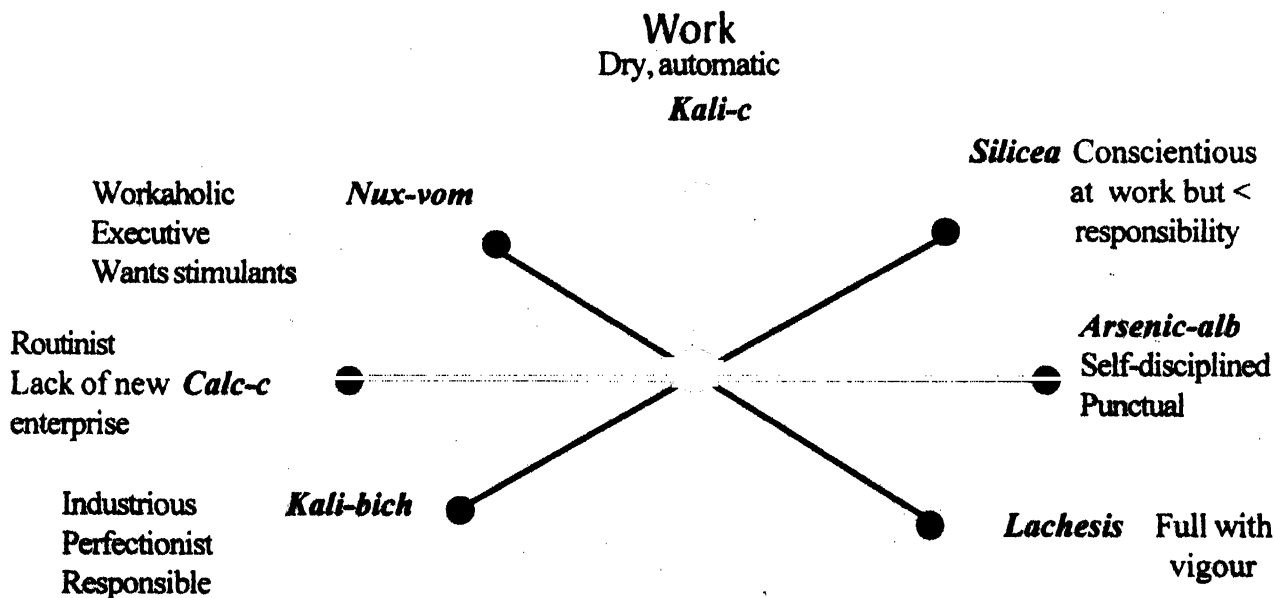

Calcarea : Wants a home; is generous; but if offended, will withdraw in its own shell.

Kali-carb : Attachment- a source of troubles; rigidity, conservatism and weak will lead to "cold war"; *Kali-c* on her own will not cut off; she is more practical and well-grounded and will keep it hanging.

Sepia : Continuous nagging and detached attitude (self-imposed. In *Kali-c* it is imposed upon by the others) results in severing the relationships. However, *Sep* does not have to break the relations with others, as others break with her first.

Staphysagria : Jovial, conciliatory until his sensitive pride is maintained; once offended, pent-up emotions will explode resulting in severing the relationship.

Kali-iod : Its crude, rude and harsh behaviour with family members with its abusiveness will rupture the relationship.

Ageing

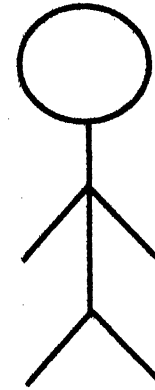

- Conium* - Unbalanced behaviour
- Silicea* - Selflessness
- Kali-carb* - Dry. Drab
- Ferrum-m* - Miserable
- Nat-mur* - Defeated
- Lycopod* - Prematurely old
- Phos* - Afraid of going old
- Ars-alb* - Dreads old age for fear of accompanying illness
- Acid-phos* - Emotional numbness, neutrality
- Causticum* - Disillusioned, paralytic
Passive insanity
- Alumina* - Self-identity loss

Appearance

Lyco
Handsome and clean-cut

Kali-c
Dry and uninteresting

Caust
Frail

Puls
Pretty

Phos
Attractive

Ars
Aristocratic

Halo Effect

Sour	Bitter	Whining	Rigid	Simple	Volatile	Volcanic
<i>Sepia</i>	<i>Nat-m</i>	<i>Puls</i>	<i>Kali-c</i>	<i>Calc-c</i>	<i>Phos</i>	<i>Staph</i>

Character

Acid-nit
Corrosive

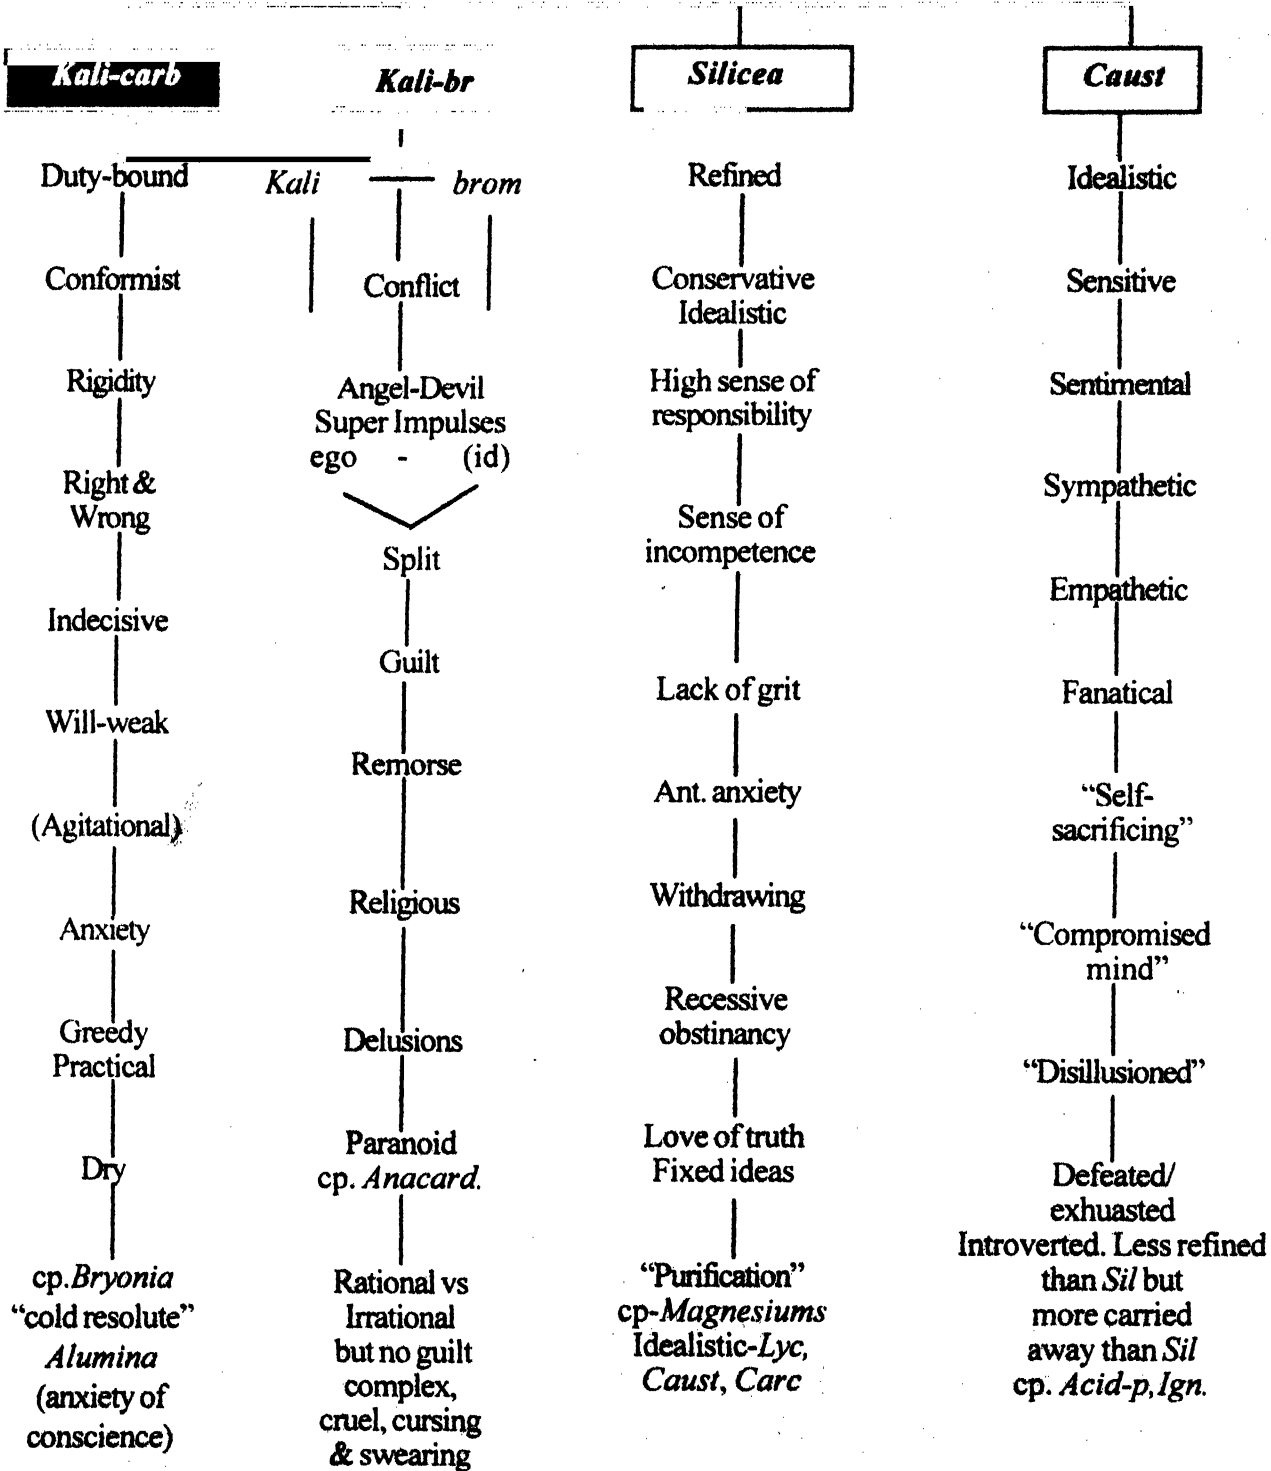

Lach
Inflammatory

Iglatia
Funeral

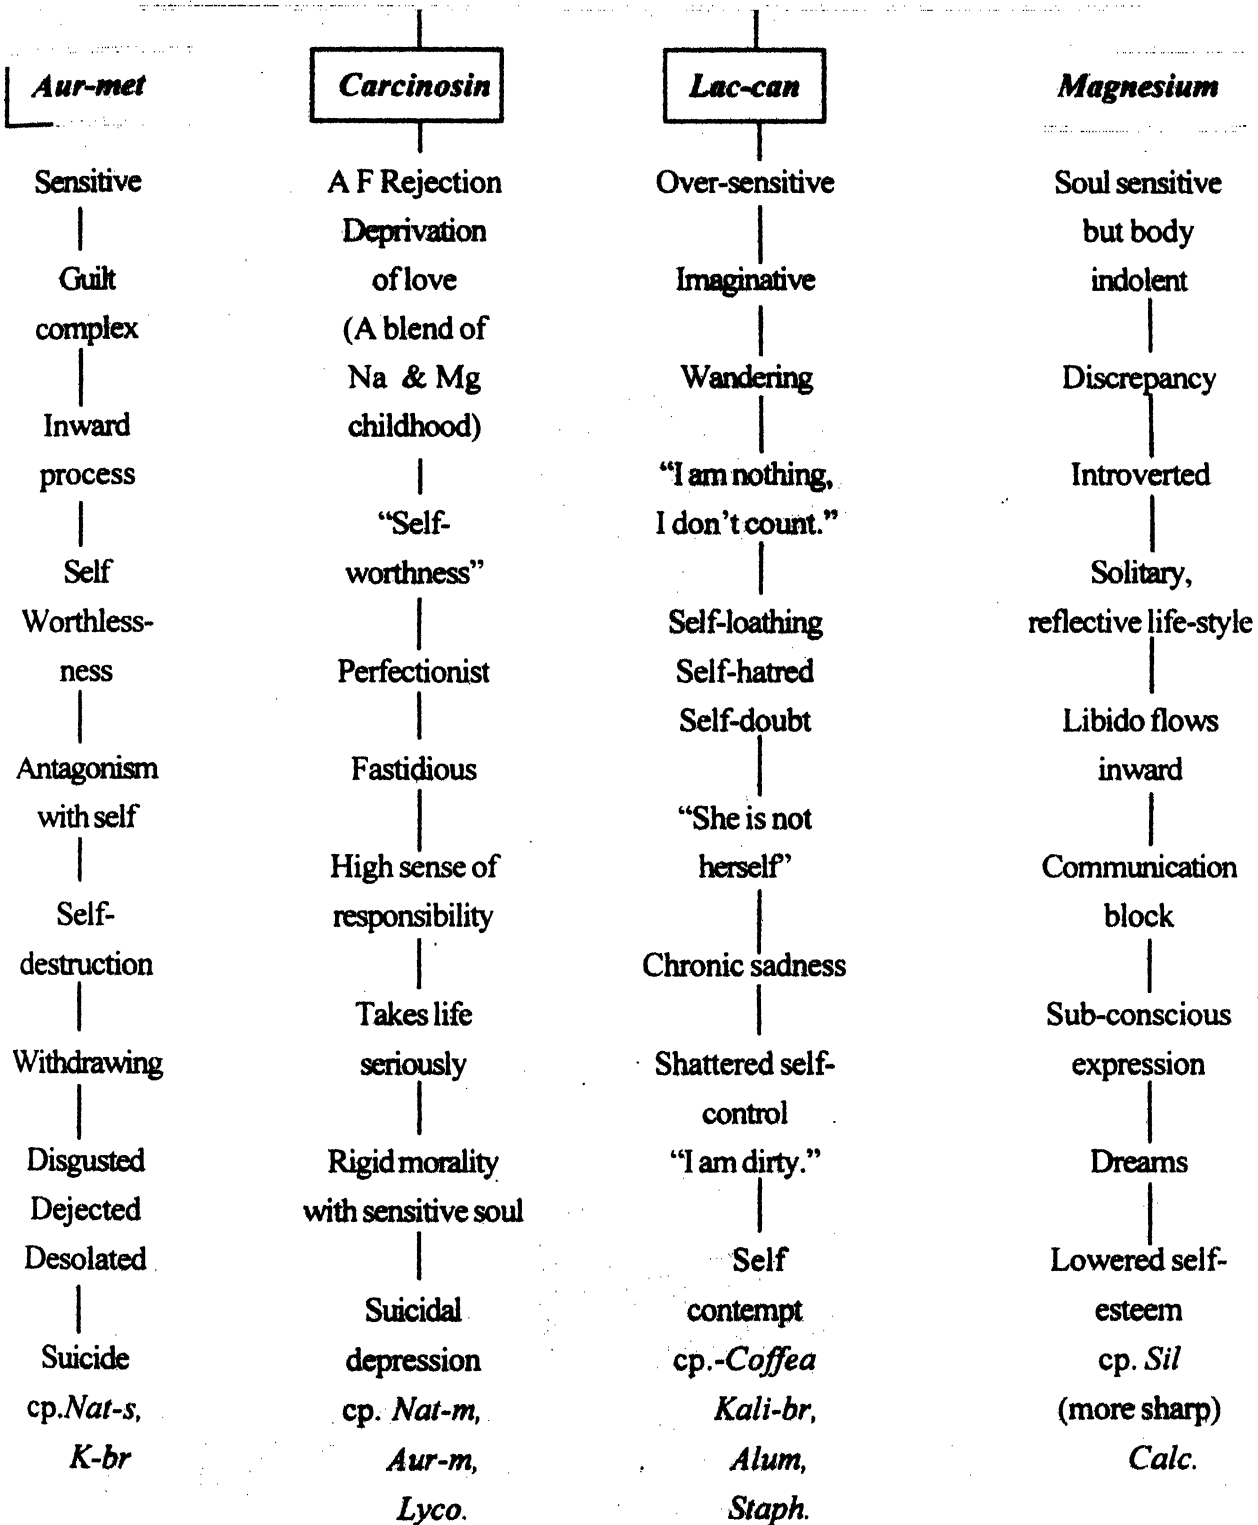

Clash, Confrontation, Argument

- Nat-m* : If crossed, *Nat-m* will fly into a passion of justification; but will not apologize.
- Lyco* : Nasty; argumentative but overbearing; others must obey; may apologize for the sake of dignity.
- Lach* : Thought - Passion - Obsession - Compulsion - Action.
- Kali-c* : Rigid, rationalizer but may heed if convinced or avoid confrontation out of touchiness.
- Nux-v* : Short-fused; impulsive and excitable and will confront with abusiveness.
- Kali-sil* : Less confrontational than *Kali-carb*, *Kali-brom*. and *Kali-iod*; the latter two are coarse and rough; *Kali-sil* is so out of loss of ambition and diffidence.

Conscientious

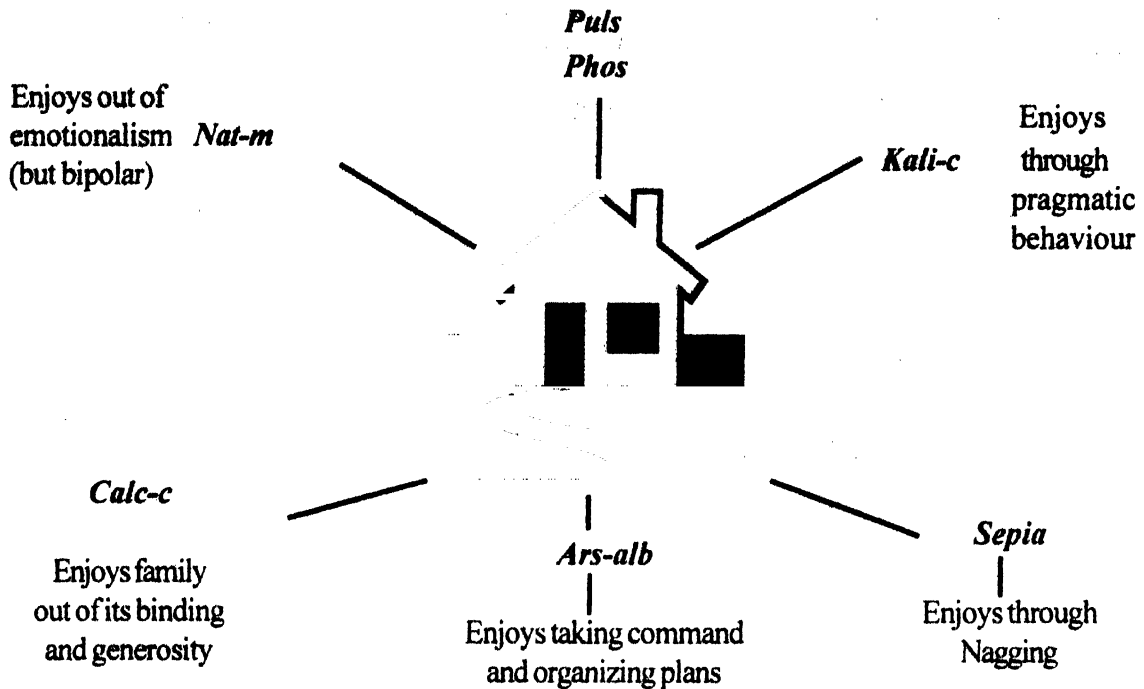

Conscientious

Anxiety

Arg-n: Trapped; ant anxiety; striking at stomach
Ars-alb: Driven & driving; reasonable & unreasonable.
Calc-carb: Timid oyster; inability to perform; insecurity.
Carb-sul: D's-Despair. Dullness. Discouragement. Distraction. Delirium. Discontentment. Dementia; sluggish psyche.
Conium: Anxious hurry; sheepish; hypochondriasis; will-weak
Lyc: Performance; threatened self-esteem
Mag: Deep anxiety; can't sense the depth of anxiety.
Nat-carb: Oversensitive; conscientious
Phos: Freedom; fearful; over sensitivity
Pulsatilla: Out of clinging; people, sickness; dependence

Ars will show anxiety very readily. In *Kali-ars* it comes a little later on owing to *Kali* element controlling the emotions (esp. the moralistic element). For *Ars* to control the anxiety will be nigh impossible. *Kali-ars* anxiety state develops gradually and becomes chronic. *Ars* is more vulnerable, has a low frustration tolerance, is more panicky than *Kali-ars*. Strong fear of cardiac disease and of cancer are marked in both.

Kali-ars is an *Ars* minus its temperament (fastidious, austere, miser, greedy) and other *kali* features (like rheumatism) and a prominent skin phase.

Selfishness

- Phosphorus* : Whole world revolves around himself.
- Sepia* : Asks for more and more; indifferent to others.
- Silicea* : Shirks responsibility and through (negative) obstinacy.
- Pulsatilla* : Constantly demands to be petted & protected.
- Nat-mur* : Insists on doing everything his own way; doesn't come out of his miserable state.
- Ars-alb* : Tenaciously refuses to yield an inch despite others needs.
- Lachesis* : Oblivious to the desires of others; extroverted.
- Kali-carb* : Fear of poverty makes him greedy; ego-centricity; hoarding instinct.
- Sulphur* : 'What is mine is mine, what belongs to you is also mine'.
- Lycopodium* : Opportunistic; miser; lust for power.
- Calc-carb* : Protects its own security; maintains its autonomic field; "hanging on to his own".

Knowledge

Carcinosin : "I am a man of worth." Perfectionist. Nature lover.

Sul : Academic. Great collector of facts. Tendency to go at the root of the problem & to ramble on intellectually about his pet subjects.

Kali-ph : Warn out. Fagged. < mental exertion Discouraged.

Calc-c : Tends to 'graze' on information but Calc is more relaxed, less formal & less rigid than Kali's & not pedantic.

Kali-c : Tends to collect a mine of detailed facts (hoarding instinct). Less passionate.

Puls : Not interested in statistics, facts, ideas or theories.

Lyc : Pedantic about the facts. Systematic and thorough study; definite goal. Academic. Sceptic.

Ars-alb : Wants very minute. Details; factual search. Passionate.

Phos : Seldom a bookish academic. Creative.

Sil : Sincere but stamina less.

Straight-forward

Lyc : To keep its dignity & assertiveness-"hold"

Nux-vom : Impulsive Short-fused Arrogant Abrasive

Lach : Sharp-tongued Disdainful Passionate

Nat-mur : Out of ego-hurting Emotional storm

Kali-c : Pragmatic Rational in conversation > quarrelsome

Sepia : Out of directness emancipation and detachment

Self-esteem

Kali's : More self-righteousness than self-confidence

Calc : Both self-righteousness and self-confidence less

Platina : Super rather abnormal self-righteousness and self confident

Puls : Self-confidence less but self-righteousness is pushed passively

Lyc : Both self-righteousness and self-confidence

Sulph : More self-confidence but less self-righteousness

Inter-Kali Comparison: Who ranks high and where?

Body

Skinny: *K-ars* assumes the high rank; most troubles have a skin phase or base. Then *Caust*

Skinny: 'Lacking in flesh' constitution is covered by *Kali-ars* the most (*Ars* dominance)

Adherent: *Kali-bich* both at the mental and physical level in comparison with other *Kali* remedies.

Discharges: More green: *Kali-bich*

More yellow: *Kali-sulp*

Action: Depressive on nerves: *Kali-phos*. Excitable on nerves: *Kali-carb*

Glandular: *Kali-iod*

Paralysis: *Caust* both at the mental and physical level.

Obesity: *Kali-carb* (sycotic miasmatic dominance added by carbonate's indolence at metabolic level)

Miasm: *Kali-bich* & *Kali-iod* run parallel in *syphilis*.

Mind

Industrious: *Kali-bich* ranks high owing to (active) bichromate element and the adherent attribute.

Miser: *Kali-carb* ranks due to hoarding and greed instinct

Stiff: *Caust* is the most refined, *Kali-iod* the opposite

pole, *Kali-bich* is also coarse and unrefined.

Religious: *Kali-brom* and *Caust* the most; the former out of guilt, the latter-idealism.

Conscientious: The highest degree in *Kali-brom* with its delusional expression (*brom* element)

Sensitivity: *Kali-carb* is the most oversensitive due to carbonate anion (all carbonates are oversensitive)

Diffident: *Kali-sil* ranks high (*K* and *Sil*). Loss of ambition and will power make it diffident; cp. *Kali-Phos*.

Apprehensive: *Kali-ars* and *Kali-carb* but the former more (anion dominance) & the latter less (cation dominance).

Anti-rest: *Kali-iod* represents the most (preponderance of *Iod* + oversensitiveness of *Kali*)

Exhausted: *Kali-phos* is the premier: both at the mental and physical level; the system worn out, fagged.

Pessimist: *Caust* has darkest mood and temper; a consequence of long lasting grief, disillusionment, vexation, et.

Schizophrenic: *Kali-brom* is evaluated high in view of its disorganized state, delusions, melancholia, suicidal mania.

Kali-Iod. Relations

Antidotes	: <i>Am-m, Arg-n, Aur, Ars, Chin, Hep, Merc, Nit-ac, Rhus-t, Sul, Val.</i>
Antidote to	: <i>Lead, Mercury, Mez, Sul.</i>
Acutes	: <i>Ars, All-c, Bel., Carb-v, Chel, Colch. Cur. (a wet-weather Bell), Lach, Merc (-c), Phos, Sumb.</i>
Complementary	: <i>(Agar), Ars-i, Aur, Bac-7, (Bar-m), Calc, Caust, 4Hep, Hydr, Kali-c, Lach, Lap-a, Lyc, Med, Merc (-c), Nit-ac, Phos, Phyt, Plb, (Sep), Sul, Syph, (Tub), Sumb.</i>
Symbiotics	: <i>Kali-c, Lach, Olnd, Phos, Sulph.</i>
Counterparts	: <i>Acid-f, Aur, Cal-fl, Hep, Kali-c, Lyc, Op, Still.</i>
Collateral	: <i>Cur, Lyc, Sep, Phos, (or Lach) and Kali-i are rehearsals of each other; one continues the work left by the other. So are Lach and Phos, also Aur-m.</i>
Is a cocktail of	: <i>Ars, Carb-s, Cur, Hep, Iod, Kali-c, Lach, Lyc, Merc, Phos, Sep, Sul.</i>

Is a version of *Sul*, a syphilo-mercurialized *Sul*.

Lach is an intensified *Kali-i*.

Kali-i and *Sul-i* (both 'syphilitic *Sul*') carry further the work of *Iod*.

Anac is deeper-acting in tertiary syphilis; *Kali-i* is unkind to one's own people, but this one (may be a child of a *Kali-i* parent) is cruel to parents, may withal be 'sold out' to spouse and children and be quite amiable towards outsiders. (Another instance of a split or unstrung personality).

Relations: *Kali-Carb*

- Affiliated** : To *Sul* (or via it) to *Calc*, *Caust* (also a *Kali*) is collateral (ie analogous or parallel).
- Counterpart** : *Arg-n* is counterpart of both *Kali-c* and *Caust*. *Lyc* is a counterpart of *Arg-n* and *Caust*. This connects *Arg-n*, *Caust* and *Lyc*, with *Kali-c*.
- Symbiotics** : *Kali-i*, *Kali-n*, *Lach*.
- Antidotes** : *Camph*, *Coffee*.
- Complementary** : *Ars*, *Ars-i*, *Bac-7*, *Calc*, *Carb-v*, *Caust*, *Chel*, *Fl-ac*, *Helon*, *Kali-i*, *Lach*, *Lyc*, *Mag-c*, *Merc*, *Nat-ars*, *Nat-m*, *Nit-ac*, *Nux-v*, *Phos*, *Phyt*, *Pul*, *Ran-b*, *Rhus-t*, *Sep*, *Sil*, *Sul*, *Tub*.
- Acutes** : *Ars*, *Ascl-t*, *Bell*, *Bry*, *Carb-v*, *Chel*, *Colch*, *Dul*, *Hell.*, *Kali-s*, *Lach*, *Nux-v*, *Phos*, *Ran-b*, *Rhus-t*, *Rumx*(contains potassium), *Spi*, *Squil*, *Stan*, *Ter*.
- Compare** : *Kali-sil* (which is a mineral *Psor*), *Sil* and *Psor* are all mirrored in *Kali-c* in one aspect or another. So also *Ran-b*.

If a *Kali-c* patient becomes neurotic, he will first require *Ran-b* (or *Arg-n*) before *Kali-c* can help gainfully. *Lach* is symbiotic in the aged's fibrous-food and garlic intolerance causing oppression about 3 am, esp. if lying on r. side. *Lach*, *Rhus* and (its appellate) *Pyro* clear up the ptomaine poisoning of *Kali-c* & (their chronic) *Calc-c*. *Calc-c* is energized by *Nit-ac* which is energized by *Kali-c*; so indirectly *Kali-c* would energize *Calc*. *Carb-v* is an acute and symbiotic to *Kali-c* (*Carb-v* emphasizes on blood, *Kali-c* on vagus, and through it on metabolism, *Carb-v* affects it directly) and is a lesser *Kali-c*. *Ascl-t* and *Bry* are nearest analogues and close-ups.

Compare also : *Cast*, *Phyt*, *Rumx*, *Squil*, *Visc*.

The *Iodides* and *Murs* are less deep-acting than *Carbs*; and of the former, *Iodides* are more angrily acting than the other two. *Iods* and *Sulphs* never disown their parents *Iodine*, *Sulphur*.

Castoreum a simplified *Kali-c* and helper to it; with more emphasis on spasm, syncope and collapse, and absence of rheumatic symptoms.

Mag-c is a forerunner of *Kali-c*, *Mag-c* after suppr. of eruptions may become *Kali-c* (the sycotic taint) and *Kali-c* may turn to *Mag-c* after lead poisoning.

Kali-c and *Kali-i* help each other in more ways than one; as e.g. the former in gastro-cardiac syndromes and psychogenic troubles and the latter in blood-dyscrasias, accretions (growths).

Kali-sil

A chemical *Psorinum*: filthiness, lassitude, chilliness, averse to open air, to bath, skin phase, lack of reaction. *Alum-sil* is ataxic, *Calc-sil* is a poly (stubborn-) chronic, *Kali-sil* is catarrhal, *Nat-sil* is irritate, and all are cold and chilly, and imbibe several *Sil* features.

Sil is more nervous and anxious; feels abused by others. *Kali-sil* has more calm perserverance.

Sil is more destructive. *Kali* element retards the action of *Sil* in *Kali-sil*.
