

## Two Homoeopathic Cures.

BY DR. NARENDRA NATH PARUI, CALCUTTA.

### CASE NO. 1.

The infant son of Babu Manindra Nath Ghosh, aged 1 year, came to my treatment with the following symptoms :—

1. Greatly emaciated.
2. Hungry all the time—would protrude his tongue in greed whenever he would see anybody eat something.
3. Cannot digest milk.
4. Passes whitish watery stools frequently day and night.
5. Head sweats profusely while sleeping.
6. Abdomen looks like an inverted saucer.
7. Has not yet cut any teeth—spine rather curved.
8. Open fontanelles.

*History* :—His grand father ( mother's father ) died of Tuberculosis. The mother chews tobacco and suffers from a chronic acidity. From his very infancy, he suffered from various complaints for which he was treated either by an Allopath or a Kabiraj. He had been suffering from the present complaints for a pretty long time and had been treated by a Kabiraj but to little benefit. His parents grew very anxious for him and despaired of his recovery.

He was under my treatment for about 3 months and took Sulphur 30 which was the 1st dose and Calcarea Carb 200, two powders at one month's interval.

The nursing mother was given one or two doses of Nux vom 30 and one dose of Calcarea Carb 30.

After 2 or 3 days of the 1st dose of Calc. he got high fever which was followed by measles-like eruptions all over the body associated with diarrhoea.

All these I considered to be the action of my remedy and did not interfere with it. These took some two weeks after which everything went on smoothly and the dose was repeated, as stated above.

The result was marvellously satisfactory both to the parents and myself, and within two months the child turned quite a different one.

It is over 3 years and the boy is in sound health all the time.

#### CASE NO. 2.

Sriman Kanailal Mitra, a student of the class IV of the D. M. B. H. E. School, Howrah,—12 years—dark complexion—one day came to my lodging with the following symptoms and history :—

1. He had a pustule-like excrescence in the white of his left eye.
2. No pain therefrom.
3. No lachrymation.
4. No defect in the eye-sight.
5. No inconvenience in the use of the eye.

*History* :—He had such an eruption on the same place some 2 years ago when he was treated allopathically and when it was removed by knife. That time he took about 3 months to come round as they said. Vaccinated more than once. His father had vivid marks of small-pox on his face. I asked the father if his wife or himself had ever suffered from any disease of the genitals to which he answered in the negative. I noted, however, the following :—The boy is always very sigh. His father, too, appeared to be not very forward.

On the above symptoms I took him to be sycotic and proceeded in the following way :—

I put him on Thuja 200 for a fortnight, after which period the excrescence looked rather diminished in size. Waited another week but no further improvement. Then

I gave him Nitric acid 200 and asked him to see me in a week when he was found improving. After another fortnight he took Thuja 200 one dose more and was all right in a month or so from this date.

It is above a year since I saw him last and he has experienced no complaint. He has improved in his mental symptoms to an extent as is marked in his class.

Lastly, it is admitted that in either of the above cases, sac lac was used twice or thrice daily throughout the course of treatment to satisfy the patient or the guardian.

### Cases from my practice.

DR. M. V. SAMUELS.

#### (1) SEPIA IN ASTHMA.

Mrs. B. M. P. aged 40 came under my treatment during June 1926. Her complaint:—At the age of 20, she gave birth to a son and whilest in the child bed, she contracted a severe cold which was finally declared to be *Asthma* by the best of the Doctors of all Schools (as most of her family members together with her husband being doctors of old school). Since then she did not conceive. She is tall, stout, dark and very mild.

When I examined her, the symptoms present were:—Constant spasmodic sneezing with cough, aggravated by moving, standing and by touching cold water. Fish, greens and many other vegetables do not agree. The attacks are on through the year and more in frequency during hot and rainy weather with large quantities of mucus discharges from the nose and mouth. She had right-sided headache and her right eye became small in size. All her symptoms were aggravated during menses
