

Case Prolapse Uterus

CASE 1

Mrs SPM aged 23 years from Surat, was a primipara when she came to my clinic.

Her complaints were:

1. Nausea – vomiting during 1st three months for which she took allopathic medicine. She was a little comfortable during her 4th – 5th month of pregnancy. But during her 6th – 7th month, she developed uterine problems. She consulted her gynecologist who diagnosed it as ‘**Prolapsus of uterus**’. She was advised stitches (Shirodkar Operation) and complete bed rest.

At this stage she consulted me to help her with Homoeopathic medicine. I asked her many questions and the following points helped me find the similimum.

1. Very irritable, easily offended with associated weeping.
2. Before pregnancy during her regular menstrual periods, she used to get severe pain, and had to take rest for a day or two. Pain starts from abdomen going down to thighs.
3. She is very much fond of sour things, pickles etc.
4. Also many times she used to get Dyspnoea worse after sleep with bad taste and profuse expectoration in the morning.

From the above points, I selected the following symptoms:

- Irritable weeping. • Bearing down sensation
- Likes sour things • Profuse bad taste expectoration.

Medicine selected: *Sepia*.

1. *Sepia C M* 2 doses given for 5 days
2. On 60th day she went for gynec check up, Gynecologist found it a miracle as the uterus was in position.

3. Then I gave *Sepia C M* one dose every two weeks, till she delivered a normal baby girl named Nirali.

CASE 2

Mrs KK aged 39 years. She came with complaint of severe bleeding and pain in abdomen during menstruation. I advised her to go for gynec-check up. It was diagnosed with the help of abdominal-pelvic sonography as “**Uterine – Fibroid**”. Gynecologist gave her some allopathic medicine and told her that if required, uterus should be removed.

She came to my Homoeopathic clinic, I asked her many general and particular questions and following points were noted.

1. In childhood when she was 8 years old, she had Pulmonary Tuberculosis.
2. She had great fear of darkness.
3. She gets repeated attacks of cold and cough with Epistaxis but during this period also she gets craving for cold things.
4. Likes salt and salty things to eat.
5. Very particular about the way she dresses up
6. keeps the house clean.

From above five important points, in Repertorial Rubrics:

- Childhood – Tuberculosis • Fear of darkness
- Epistaxis • Bleeding tendency
- Particular nature.

1. I have started with *Tub 200* x 3 days daily one dose.
2. Then *Phos 10M* two doses/day for 5 days. After 5 days bleeding stopped and abdominal pain decreased.
3. Then *Phos 10 M* daily for 7 days. After 15 days Sonography done. Fibroid had reduced to a small spot.
4. Then *Phos 10 M* every month for 6 month.

Now Mrs KK is away from her complaints and enjoying her life, thanking Homoeopathy.
