

# Carcinosin: An understanding

Authoritative Viewpoints from various authors.

**ABSTRACT:** *Carcinosin is a great remedy but little used in India-The reason that we devoted an entire SSMS to it. I have tried to give an understanding of it from various authors, mostly foreign authors. Plan: Nosodes-an understanding, General information: Foubister/Dey/Don Webley, Deborah Olenev, Paul Herscue Tinus Smits. Jurgen Becker and Degroote Philip & Rep Representaion. Finally evolution Childhood to old age.*

**Dr VISHPALA PARTHASARATHY LCEH**

Milan Clinic, Saraswati Road, Santacruz (W), Mumbai-400 054  
Tel : 26492762 / 26042749. E-mail: vishpalap@bom3.vsnl.net.in

Evolution Child → old age, Jurgen Becker's Cinderella understanding, Degroote Philip symptomatology of *Carc* and Repertorial representation.

**NOSODES: PACEMAKERS OF OUR HMM** are variously called

- **INTERCURRENT REMEDY:** Helps to restart the reaction when, for whatever reason, it stalls in mid-stream
- **MIASMATIC REMEDY:** Initiates the curative reaction and relieves the system of the miasmatic load.
- It is an **INCOMPARABLE POWER:** Needs to be harnessed and used judiciously- to kindle the vital reaction and open the doors to the ultimate healing.

**NOSODES: MOST POWERFUL Rx: WHY?**

- Source of power lies in its origin
- Nosodes contain cause of 1) Disease + 2) Reaction of Living organism to it
- Eg *Medorrhinum*: Made from pus of Gonorrhoea. Contains Gonococci (causative organism) + vital reaction of human organism to Gonococci
- This juxtaposition of combined- Cause and Effect make Nosodes so powerful
- *Carcinosin* bears the combined result of cause of cancer and resistance of system against it

This is a great explanation from the little booklet **CARCINOSIN BY S P DEY**

- First prepared from products of scirrhus Cancer of breast, by Dr D M Foubister in 1950

and researched in London, on 200 women with breast cancer.

Made from disease product, so excellent for getting at deep genetic causes.

- H/o repeated inflammatory diseases: This means maltreated/untreated inflammatory disease in childhood lead to cancer.
- ie inflammation: The beneficial defense reaction against irritants, is perpetually whipped by palliation.

**HOW DOES A DISEASE EVOLVE?**

- Suppressed skin → Asthma
- Suppressed rheumatic disease → Valvular disease
- Suppressed pulmonary Koch's → Mania
- But again if Mania is suppressed → ? Where can it go?
- This means relentless suppression makes the body revolt
- It is as if the body is not allowed to shelter anywhere; not allowed to take recourse to a disease and just remain. Just as continuous hounding makes even a peaceful tribal people revolt and become aggressive, so too the body revolts - stops differentiation - allows quick mitosis and undifferentiated growth ie cancer.
- In today times of impatience and obsession with outward appearance-
  - An acne hardly erupts and a cream is applied
  - A rash must get treated the same day
  - A headache- must take a tablet

- A burp? Take an antacid. Even a child's burp is not tolerated
- Where will this relentless suppression lead?
- Any long lasting suppression of any disease condition - mental or physical leads to turmoil of the whole system.

After this general introduction, let us take the understanding of Carcinosis from various authors.

**CARCINOSIN: DEBORAH OLENEV:**

*Carcinosis*- is like a place where so many paths cross and link.

- People develop *Carcinosis* symptoms and characteristics as an adaptation to modern life. It resembles and has points of contact with so many remedies. Best represented by Automobiles, Airports, Traffic lights, Bicycles, Highway, Trains, Airports, Buses, Airplanes, Train stations, Gasoline stations: the commonality of all these is their relation to transportation, monuments to our love of travel. How much natural resources and personal resources are we sacrificing to this love? What % of incomes goes to this end?
- Has it really improved our lives, or has it lowered our standard of living and our health?
- She believes that the energy created by the transportation boom is a major contributing cause to lowering of health of the population.
- 2 big remedies with love of travel: *Tuberculinum*- Nosode of 19<sup>th</sup> century.
- *Carcinosis*- The remedy which embodies the spirit of our century.
- A great difference between this century and earlier centuries: Our time is extremely structured: Most of us wear watches:
  - the eight hour work day, the six hour school day, activities to do on time in the evening
- How does this concern with 'being on time' affect us health-wise?
- Where has our freedom gone? We are regulated like clockwork
- 2 remedies stand out for needing to be on time
  - *Natrum-mur* and *Carcinosis*

- The workaholic syndrome
- The need to be responsible in order to survive
- The problem of people taking on too much responsibility, OR the opposite phenomenon - not assuming enough.
- The whole theme of responsibility is a major one in cancer.
- *Carcinosis* and *Calcarea-carb* are our two main remedies for people who take on too much responsibility at an early age.
- Encouraging our children to grow up too quickly can be very detrimental to their health.
- Overworking our children at schools, assuming too much responsibility and display too much success at an early age, is predisposing them to cancer.
- Today's houses- Streets neatly lined up, lawns manicured, trees trimmed, beautiful cars, in two car garages.
- This perfect and fastidious image that we all try to maintain, how healthy is it?
- *Carcinosis* and *Natrum-mur* are excellent remedies for perfectionism and fastidiousness.
- So much vital energy expended in trying to maintain this order-to-control and take charge rather than let things develop naturally, as would, when nature left alone.
- Underneath this need for perfection, lurks a terror of chaos and lack of control, a fear of letting go.
- One vaccine which caused untold damage - The smallpox vaccine- mimics gonorrhoea in the body. It causes alterations to genes similar to big 'G' as if genetically been infected with gonorrhoea.
- In order to get cancer, homeopaths believe that the gonorrhoea miasm must be present in the body. So maybe we have the cancer epidemic today, partially because of smallpox vaccines administered half a century ago?

**CANCER, A DEEPER UNDERSTANDING:  
Dr TINUS SMITS.**

**To Discover Essence of Carcinosisum**

- Understand basic problem of Ca pt

## General Theme

- Understand what exactly is a tumor, because *Carcinosinum* is made from the materialization of the cancer problem.
- The cancer patient has permitted cells that are 'not him' to grow in his body without activating his defense mechanisms sufficiently to destroy them.
- The tumor is a foreign entity; it does not respect him and finally destroys him, without respecting his structures- blood vessels, muscles, lymph nodes-grows by transgressing every structure, every border.

### COMPARE PATIENT TO A COUNTRY

- An army defend its borders integrity. If enemy crosses border and establishes himself and army not strong or well-trained to capture, imprison or kill, enemy will call friends and settle down; will destroy everything around; grab their food and homes. They will send soldiers to other places in the country (metastasis) to take over all the power of the country
- The country has finally to ask other countries to help to overcome the enemy with heavy weapons (surgery, radiation and chemotherapy). But such a massive fight greatly weakens the country and outcome is uncertain.

Same at the cellular level: The membrane of the cell is unstable and weak and ingests toxins, not able to defend its integrity. These ingested poisons damage his normal functioning, creating anarchy and estranging himself from his own essence.

### WHAT ARE THE CAUSES?

- It begins long before at emotional and mental level, due to various influence
- Eg Medical Influences: Massive vaccination in early childhood gives message to the immune system that his own defense mechanism is not reliable and he needs outside protection. It weakens his immune system and sends message that he is not strong and good enough and has to rely upon others rather

than upon his own force and vitality.

### .... OR OUTCOME OF SUPPRESSION

- Suppression of fever, a defense mechanism, use of antibiotics and corticosteroids lowers defense mechanisms. If during every infection, parents suppress reactivity of child by giving aspirin and penicillin, how can he still believe that he is able to defend himself against invaders (bacteria, viruses, etc)?
- This lack of reactivity leads to development of severe illnesses in childhood as pertussis / pneumonia / chronic otitis/ bronchitis/ rhinitis etc)

### HOW DOES THE HEALING PROCESS BEGIN?

- How does taking *Carcinosinum* help?
- Self confidence grows; he listens to own needs; defends self -recognizes 'him' and 'not him'.
- A process of cleaning out at all levels: poisonous relationships broken off or corrected → a consciousness of being someone deserving respect and love blooms gradually → a marked influenza or inflammation with high fever for the first time in twenty years cleans the poison from his body.

### ESTABLISHES REACTIVITY

- *Carcinosin*- Tendency to place strength outside himself; to feel weak and vulnerable inside.
- When finally gets tumor and needs surgery/ radiation / chemotherapy: becomes helpless, desperate and completely dependent on doctor.
- You have to give them back their strength and they have to take it back.
- Dr Bernie Siegel\* advices that 'Patient must be assertive
- When hospitalized ask for room with a view and favorite music
- Stand up and fulfill his own needs: of prime importance in cure.

### RESTORATION OF HOPE

- Damage by doctors: Complete annihilation of any hope for cure.
- In hospitals, hope often killed, with the use of inexorable statistics.
- Giving any hope is considered as giving 'false

hope'.

- But what is false hope? Saying to your pt that you will surely cure him, will not die.
- But the patient needs hope. No patient can cure if he, himself, does not decide to survive and for that he needs hope.
- Hope that he will not necessarily die
- That he, himself is capable of finding solution to life threatening illness.
- Hope that he can reconnect with his inner force, even if for surgery, radiation/chemotherapy he submits completely to authority of doctor.
- That his doctor will support his effort, will give best treatment, not quote statistics. And later, help him take up responsibility for his own life and guide him to do more than only wait and hope and pray for no relapse.
- It is a bad sign that cancer patients are so often robbed of any hope of cure.
- Saying: Madam, be well aware that you have an *incurable* disease? – is a killer
- In our quest for being safe, we doctors want to impress on the patient the "truth" and facts!

FALSE HOPE?!: Dr Bernie Siegel, an American Surgeon, gives us a clear vision on false hope. "The concept of false hope is one of the most ridiculous things I know of. Why should we try to authorize hope according to the statistics? Hope is a variable that can change the statistics. If only 99% die of a condition, then let's stress the fact that that person has a chance of not dying. If you tell a group of those people that they are the 10% who will survive, you may find that 30% or 40% or 50% get better." that the nos get better with hope.

**CANCER = LOW REACTIVITY**

- The tumor: low reactivity stage. There is no acute phase, no fever.
- Reactivity: important quality of our physical, mental and emotional body
- If person has tendency to be suppressed by others, then the immune system does same on the physical level. Stats: immune system

of optimistic people is 60% stronger than of pessimists.

**FATHER PRINCIPLE**

- Father: Symbol of self confidence, of strength, of social position and realization of possibilities of child.
- Basis for *Carcinosin* problems lies in childhood. The father has to re-affirm child's capabilities and encourage him when things go wrong.
- If he criticizes, and never praises when done well, or if father is simply not there or if too demanding, child will feel incapable of fulfilling father's expectations and too weak to do anything.
- To resolve his problem of feeling weak and worthless, to prove that he is capable by controlling everything, he becomes very persevering, extremely well organized, plans everything, leaves nothing to chance

Before *Carcinosin*, pt says

- I am not allowed to fail, to make mistakes; everything has to be beyond reproach
- I didn't get praise, rather my father said I was not capable of doing this or that; I let myself be suppressed easily; I still have lot of suppressed anger
- I feel less worthy than other people. I am the black sheep; my father criticized my appearance
- I cannot say no, I accept everything, otherwise I feel guilty; I always avoid conflicts.
- I easily agree with everything and everybody, I cannot stand up for myself
- I cannot remember that I ever had fever

After *Carcinosin*, pt says

- I feel I am someone; feel valued, feel confident
- Take time for self without feeling guilty.
- Help others' problems without taking them on.
- I feel clearly what is mine and what is theirs
- Can say no- defend my own space. I allow myself to be angry when anybody shows disrespect

## General Theme

- Express what I think and feel; I do my best and then it is okay, it doesn't have to be perfect
- I keep a distance from my father have my own life
- I set boundaries for children; satisfy my own needs
- Is this not a wonderful change ??

### CYCLE OF CARCINOSIN: PAUL HERSCUE:

#### 6 Stages of Carcinosis Cycle

- Fear
- Let themselves be taken care of
- Inwardness
- Resentment
- Frenetic Breaking Out
- Breakdown/ Weakness

#### I. FEARS

- Fear of being alone, crowds; Mirrors
- Of animals, of insects and spiders
- Of the future, riding fast
- Fears about their health, of medicine
- Ailments from anticipation
- Fear of abandonment
- Fear of cancer, AIDS, germs
- Fear of emotional pain
- Fear of failure; of heights; of narrow spaces (claustrophobia)
- This fear is really about ability to make their way in the world
- Since cannot affect change in own life → everything seems threatening, uncontrollable
- Choose a strategy for survival which pushes them to the next phase of cycle

#### II. LET THEMSELVES BE TAKEN CARE OF

- If can't trust own ability to make your way in the world
- Let someone else take care of you
- Result of overbearing parent who 'train' patient to be dependent
- Company >, sociable, loves affection, affectionate, caresses, smiling
- > carried, > rocking

#### DESIRES COMFORT

- Seaside air >, warmth of bed > legs, music >,

warm drinks > throat, everything >.

- Desire comforting foods: butter, chocolate, delicacies, eggs, fruit, milk, sweets, sugar.

#### III. INWARDNESS

- Theory of overreaction: get what you want, but get too much - the intensity makes it insupportable eg *Puls*: consolation<sup>3</sup> → fear smothering
- *Carcinosin* wants to be taken care of, and submit their will → lose sense of self- not being a solid individual, the parent, but Suppression → loss of self (*Staph* or *Nat-m*)
- Quiet and inward. Tend to hold on, to suppress their feelings- don't speak out.
- Things dwell and swell up inside of them.
- Abdominal pain, bending double ameliorates > sleep position on knees with face forced into the pillow.
- This pretty much describes the passivity.
- The over-attention becomes cloying.

**SYMPTOMS:** Cautious, reserved, responsive without interest, taciturn, suppresses his desires, aversion to company, anger with silent grief, suppressed grief and answers in monosyllables.

#### PHYSICAL SYMPTOMS

- Physical symptoms reflect the same idea: held in, constricted, can't move, swollen.
- Physical symptoms: Styes, stiffness of lower jaw, abdomen constriction, rectum constriction, constriction heart, swelling of mammae before menses, extremities pain < motion. They can only take this "holding on"

#### IV. RESENTMENT

- They get resentful. Can't hold it in any more and become contradictory.
- Delusions she has suffered wrong, unhappiness due to influence of others and delusion: arms do not belong to her.
- She can't do what she wants. Her arms, used to accomplish things, won't obey— is at other's mercy and resents it.

#### CONTRADICTORY

- Contradictory states, capricious, intolerance of contradiction, disobedience, quarrelsome,

ailments from domination, ailments from reproaches, discontented, disgust, anger at his mistakes, remorse, sensitive to reprimands, dreams of murder, conversation aggravates.

- Feels closed in; bothers them. They have fear of narrow spaces or riding in a carriage (closed in). At this phase, everything that looks like consolation or affection makes them worse: consolation aggravates and seaside air aggravates.
- Eggs, fruit, and milk were comfort foods. Now averse to them, or aggravated by them.

**V. FRENETIC BREAKING OUT**

- Finally they have to break out.
- Excitable, sexually intense, love to move. They are on their own. They finally can take care of themselves.
- Symptoms include: dancing, desire for travel, restlessness, blueness of sclera, runs about, disposition to masturbate, cheerful when it thunders and lightning, extremity pain > motion
- They are finally alive.
- They start taking care of others.
- These rubrics include: Caring for others, Too much of a sense of duty, Anxiety about family, Full of cares for others, anxiety for others, They do many things for others, like *Phosphorus* or *Causticum*.

**VI. BREAKDOWN**

- They break down; are weak and sad
- Symptoms of the breakdown: Schizophrenia, suicidal disposition, mouth apthae, ulcerations and bleeding- The effects of cancer can be found here
- Expending so much energy has weakened them. So much so that they resemble *Phosphorus* or *Pulsatilla* or occasionally *Medorrhinum*.
- They feel other's pains
- Also feel other's beauty
- Just as *Phosphorus* feels the music, sees the colors so vibrantly, so too does *Carcinosin*.
- But it is a sensitivity that can come from weakness and from being too open.

**CYCLE COMPLETE: FEARFUL:** The breakdown and weakness push them back into being fearful and the cycle comes full circle and starts again. Thus the cycle is complete.

**CARCINOSIN: Rx OF POLAR OPPOSITES: DON WEBLEY**

(Editor: Don Webley has been covered in a separate article. so here i will only just give an introduction).

**DON WEBLEY'S 4 ASPECTS OF CARC**

- The Family History
- The Great Masquerader
- The High Intensity of *Carc*
- The Polar opposites
- AF Suppression of tuberculosis, as a precursor to *Carcinosin*.
- Observations which point strongly in this direction: Strong F/h of TB. Common Symptoms: The hair on the spine, blue sclera, genu pectoral sleep position and desire for travel.

**WHERE IS CARCINOSIN TO BE USED?**

- Strong F/h of Cancer in parents/grandparents/relatives before pt's birth
- This gives the child - cancer miasm - not predisposition
- H/o long lasting suppression of any disease - mental or physical

**CARCINOSIN: HOW EVOLVES?**

- It is as if the number of suggestive illnesses in the family tree needs to rise to a certain "critical mass" before the cancer miasm explodes into being.
- Therefore child may take *Carc* while parents are other remedies but...
- Rarely do parents need *Carcinosin* and the children do not. We are, as it were, witnessing the unleashing of a new horseman of the apocalypse upon the world in this generation—reflected in the steep increase in occurrence of cancer over this same period.
- The fact that the nosode appears, ex nihilo, as it were, in this generation, suggests that we have perhaps glimpsed the tip of this monstrous miasmatic iceberg
- *Carcinosin* is destined to be the nosode of this

## General Theme

age just as *Tuberculinum-bovine* was the star of Kent's day. There are shadows of *Medorrhinum* in this nosode, also- the hyperactivity in children, increased sexual desire, amelioration by the ocean, genupectoral sleep position, desire for salt, sweets and fats, and insomnia.

### **CARCINOSIN: SYMPTOMATOLOGY : DEGROOTE PHILIP**

- Hot patient - can go barefoot in snow
- Likes windy weather and walk in rain
- Enjoys thunder and lightening
- Can even think better in thunder
- Likes music and musical instruments
- Addicted to Television
- Few fears. Whenever felt Fear- sensation of flutter in abdomen
- Guilt leading to Compulsive washing
- Few childhood diseases- no one to nurse her, so can't afford to be ill!
- Sudden illness and quick recovery
- Prone to severe chest infections
- Hard working to the point of rigidity
- Upright. High moral values
- Straightforward
- Balanced
- Dislikes lies and injustice
- Affectionate
- Sensitive
- AILMENTS FROM: anticipation, fear, fright, reproaches, rudeness of others
- Trembles when angry
- PHYSICALS: Sleep position - prone to begin with and then on side with knees bent..
- APPEARANCE- Rarely fat, Cafe-au-lait complexion, Blue sclerotics
- Desire- Chocolates
- Scanty hair on Occiput

### **CARCINOSIN: RUBRICS IN REPERTORY:**

- Anger, mistakes over his
- Anxiety- Family about his, others about
- Clairvoyance
- Conscientious, about trifles

- Consolation, kind words AGG
- Dancing, love of
- Domination or excessive parental control, long history of
- Duty, excessive sense of
- Fastidious
- Grief, cannot cry
- Industrious
- Music loves
- Offended easily
- Precocity
- Sadness, children in
- Starting sleep from
- Talk indisposed to
- Thunderstorm loves
- Timidity, unfortunate feels
- Unhappiness, prolonged due to other people's influence

### **EVOLUTION OF CARCINOSIN: CHILDHOOD TO OLD AGE**

#### **EVOLUTION: CHILDHOOD**

- An overbearing parent may 'train' the patient to be dependent, by not encouraging them to make their own decisions, by constantly doing things for them, or by giving them the message that they are not capable of doing things for themselves.
- Rejection from parent or sibling may even be through death or desertion. How this is dealt with?
- Denial of emotional attachments leading to dampening of spontaneity, loss of pleasures and inhibitions of free expressions would be natural outcomes
- Common diseases: temper tantrums, eating disorders
- The focus was that the child should be perfect. So the child learns to suppress his exuberance and desires and behaves like a little adult - one in control.
- Fortunately, there is an artistic bent and dancing often becomes his expression and survival mechanism
- Craves all that is comforting: warmth of bed

and warm drinks

- Music
- Company, affection and caresses.
- Desires to be carried and rocked.
- Warmth producing food: butter, chocolate, delicacies, eggs, fruit, milk, sweets, sugar.
- Later in life, whenever need to be taken care of, these same foods comfort.
- The pressure is on being perfect: perfect manners, they sit and behave themselves and are not mischievous.
- Fastidious, will put away the toys.
- All this leads to anticipatory anxiety. *Staph*, a close remedy - AF insulted by one whom he depends. *Carc* - AF being heavily controlled by person on whom depends.

#### CARCINOSIN CHILD

- The child was never taught how to take care of self and of emotions. This results in much guilt- the hallmark of *Carcinosin*, who always:
- Feels that she has done something wrong.
- Or takes blame if something goes wrong in the family.
- Never retaliates or objects

#### EVOLUTION: CHILDHOOD

- Repression and denial are the powerful ego defenses around which various psychic and somatic patterns manifest themselves.
- This becomes fertile soil giving way to aberrant or depressed immune responses leading to prolonged severe inflammatory illnesses or hypersensitivity disorders

#### JAY LUCAS: CARCINOSIN CHILDREN

- Today number of *Carcinosin* children in practice are alarming.
- This has a lot to do with socio/ political lifestyles of many families in Britain, ie *Carcinosin* is a middle /upper class remedy. Britain is a nation of *Nat-mur*'s (stiff upper lip and surrounded by sea salt as we are), so you can begin to see the pattern emerging of the need to prescribe this remedy often.
- Suppression is at the heart of *Carcinosin* - a physical suppression such as an early skin condition- *yukky* skin and the child is whisked

off to the doctor.

- Emotional suppression- love is given in a very controlled way. Reared by nannies, parents hardly ever really see their kids, given only materialistic love ie lots of toys.
- Children must be seen and not heard- strict rules about what they mustn't do.
- It has a lot to do with mess, dirt, untidiness, running around (all the things that kids SHOULD BE, but they mustn't be) so back to intolerance of a skin condition - a sense of disgust. So children develop a life full of order and fastidiousness
- The child is taught not to be dependent on parents, but become self sufficient and controlled (the famous British stiff upper lip).
- Yet parents often have huge expectations of their children. Emotions suppressed but expected to develop intellectually instead. Intellectual without being truly artistic.
- So child becomes a hard worker at school and big achiever.
- Very serious in their work and quite reserved.
- Marked intensity.
- Child has frequent and high fevers.
- Is often hyperactive; has a difficult time going to sleep and staying asleep.
- He has "exceedingly strong food cravings which often alternate with aversions" so that frequently one hears, "I used to LOVE eggs, but now I hate them."
- Often very early eruption of both deciduous and permanent teeth in a number of cases.

#### ADOLESCENCE

- Well behaved. Attentive. Dished out to other "terrible teens" as perfect examples of how a son/ daughter should be
- Attracts a lot of hate, albeit guarded/ disguised, in peers and friends. Often teased and abused just to get even
- A teacher's favourite as is always the teacher's helper. Completes work, writes and submits neat assignments. Clean books. A teacher's delight and a peer's nightmare
- Great passion and sexual intensity, beginning

## General Theme

- often at a young age
- Love of dancing and music, desire for travel, and exhilaration in a thunderstorm
- Forms strong attachments to one person, who could be a teacher
- Control, order & duty is what is taught and when children develop along those lines, the damage has been truly done by puberty
- This is an age where disease states begin to emerge
- Sexual awareness is often the first to start causing problems. In childhood: mess, dirt, untidiness is not tolerated. Now it is intolerance of a skin condition - a sense of disgust
- Therefore no acne is tolerated
- Teen years - anorexia, bulimia, early sexual behavior, early drug use, addictive tendency kicks in, anxiety, over-responsibility

### ADULTHOOD

- Rigid conservative set up with strong moral values. Parents work situation also appears disciplinarian and ethical. Perfectionist parents demand excellent output. This gives rise to perfectionist, obsessive, fastidious, serious, conscientious traits of *Carcinosin*
- Without free love in childhood, self worth cannot develop - so you grow into an adult who becomes entirely subservient, a martyr, controlled by duty.
- Feelings of blackness and gloom but not in the *Aurum* sense because underneath you often feel that there is a really nice person trying to get out but they have a deep sense of sadness about them.
- If control is the key → Ritualistic states, fastidiousness, miserly and suspicious
- Lurking fear still remains, so even as adults have need to be stimulated all the time, want to travel, become addictive' maybe, even addicted to sexual matters.
- If strong psoric influence, more likely to get total indecision, an inability to commit to anything, apathetic states and loads of allergies.

### CARC: ADULT - WOMEN

- Always tastefully dressed; never gaudily like

### *Lachesis.*

- Very house proud. Perfect house to the point of neurotic.
- *Nux* wants things in place. *Carc* wants perfection. Reminds me of a character in *Desperate Housewives*, who must leave the house neat, even when husband has a heart attack...
- The *Carcinosin* woman is very attractive; with an aura and an energy tangibly sexual: *Carcinosin* takes a back seat to few as regards the intensity of its libido
- The sexual urge is simply the adult manifestation of the energetic intensity with which the patient has lived since childhood.
- Maybe a history of promiscuity, but more often long- term intense relationships. The *Carcinosin* sexuality is emotional rather than genital, more refined and less coarse, and less emotionally complicated than *Medorrhinum* or *Lachesis*.

### OLD AGE

- Now comes the dilemma - needs everything to be perfect and can no longer cope with that.
- Cannot pick and dust and clean as health does not allow. Yet troubled by non-perfection. Now can come an attitude change which may bring about calmness.
- The ability to accept cancer - but withdraws from life. No longer wants to meet people; embarrassed, a feeling of disgust and dirtiness about self.
- Stops mixing, going out, eating with other people. How will they feel?
- Unless comes the hand of *Carcinosin*, to restore their balance
- A 60 yr old recent, 2006 case, with cancer jaw- operated. Difficulty in eating, Aphae- stopped going out since 1 yr. With Rx, within a week went for a party and ate in front of everyone
- In March he went to Shirdi- he has not been out in 2 yrs. He organized everything - - daughter told me yesterday- she is so..o.. happy

**LEARNING FROM FAIRY TALES: JURGEN BECKER**

*The Jurgen Becker understanding*

- Mother ...Sick.. Nursed her.
- Learnt exactness. Carefulness. Insight.
- Mo died early. Orphaned. Submissive. Hard worker.
- ... Cinderella - the Cinder girl-
- ... relegated to the background.

**CINDERELLA**

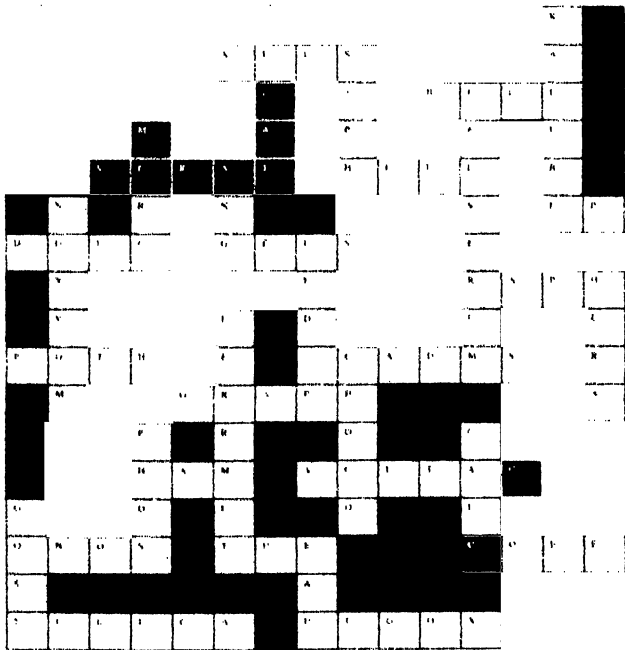

- Helpful, Cheerful and always hopeful.
- Mo had promised to appear whenever needed.
- From this evolved The Fairy godmother concept, who appeared whenever the situation seemed desperate or hopeless.
- Thus were born traits of: Precocious - learns fast
- Careful. Fastidious
- Helpful. Dependable
- Hard-worker. Non-complaining
- Love for nature, animals, birds
- Optimism. Hopeful.
- Clairvoyance.

- Long history of Domination and Suppression- Yet no anger, no fight.
- Learns to hide emotions. Closed up.
- No expression even on reprimand
- Fear Failure- constantly strives to do better
- Worse Consolation yet sympathetic to others.
- Very helpful. Caring. Affectionate. Helps the weak... specially animals.

**CAN I END WITH RECOMMENDATIONS FROM OLENEV?**

- Can homeopathy help to restore that inner simplicity and purity to people who use it? Yes, I believe it can. We have to match the force and vibration of the illness to the force and vibration of the remedies.
- Homeopathy has remedies with the depth and scope to address the problems of modern man.
- But Homoeopathy cannot do it alone. We must make our efforts:
- Do less, Travel less, Work less, Worry less
- Practice goodwill rather than resentment

Cases: All 4 given in last issue.

**SHE WINS THE PRIZE!!!**

**EVEN THOUGH THERE WERE A FEW DIFFERNCES WITH THE AUTHOR, YET IT WILL SERVE.**

**CONGRATULATIONS!!!!**
