

Taking a review of the mental and general symptoms, I chose *Thuja occidentalis* and decided to administer it in the 30th potency, though the excrescence was not cauliflower like. The effect was simply marvelous. The medicine was given in the night, and in the morning the patient woke to find the growth entirely gone! There was not even a trace of that huge growth. It returned, however, after a week in a mild form, and another dose has completely cured it; and she is quite well up to now.

#### A CASE OF HERNIA.

LATE DR. MAHENDRA LAL SARCAR, M. D.

Babu N. K., aged about 36 years, is subject to hernial protrusion in the right inguinal region. The protrusion does not advance much beyond Poupart's ligament.

On the 17th August last at about 11 A. M. he had an attack of this kind. The immediate cause appears to have been straining during defæcation. The tumour was hard and very tender to touch. The patient remained quiet in bed, the bowels moved once or twice; at about 5 P. M. very gentle taxis was applied to reduce the hernia without any success. As there was no urgent symptom he was no further molested; but was ordered to remain quiet in his bed and to apply ice over the tumour. Ice was applied with an ice bag for about an hour but it did no good. The patient remained in this state during the whole night and had very little sleep. On the morning of the 8th I was consulted. I prescribed *Nux. Vom.* 30. One dose was given at 7 A. M. and another at 11 A. M. In the Meantime the patient had one or two stools, and felt easy enough to take a bath and a meal of rice. The hernia went back completely at about 3 P. M., as it used to do before under the same medicine.
