Summary of Technical Requirements

Follow all formatting requirements.

- *Double space all parts of manuscripts.
- *Illustrations, tables, unmounted prints, should be separate from the article and be no larger than 203 X 254 mm (8 X 10 inches).
- *Include permission to reproduce previously published material or to use illustrations that may identify human subjects.
- *Enclose transfer of copyright and other forms.
- *Submit a paper copy and a floppy disk, CD or email version of the article.
- *Keep copies of everything submitted.

Preparation of Manuscript

Full-length articles, case reports, reviews, editorials, etc: Should be submitted on paper and either email or disk.

Requirements for paper format: Type or print out the manuscript on white bond paper, 216 X 279 mm (8.5 X 11 inches), or ISO A4 (212 X 297 mm), with margins of at least 25 mm (1 inch). Type or print on only one side of the paper. Use double spacing throughout, including for the title page, abstract, text, acknowledgments, references, individual tables, and legends. Number pages consecutively, beginning with the title page. Put the page number in the upper or lower right-hand corner of each page.

Research papers

The text of observational and experimental articles is usually (but not necessarily) divided into sections with the headings Introduction, Methods, Results, and Discussion. Long articles may need subheadings within some sections (especially the Results and Discussion sections) to clarify their content.

Manuscripts on Disks

Papers should be submitted in electronic form (email or disk) as well as on paper. The AJHM can accept a variety of word processing formats or text (ASCII or RTF) files.

When submitting disks or email, authors should:

1. be certain to include a print-out of the version of the article that is on the disk or sent by email (mail separately to editor);
2. put only the latest version of the manuscript on the disk or in the email;
3. name the file clearly;

4. label the disk with the format of the file and the file name;
5. provide information on the hardware and software used.
6. be sure to include the author's name(s), address, and email address within the body of the text.

General formatting requirements

Please pay special attention to these requirements as manuscripts submitted without the following formatting will be returned for revisions.

Please avoid the temptation to try to make your written work look like a published article. Once your article is edited, our journal's style and design will be applied to your disk or computer file before it is output to typeset pages, and these are applied most easily to an unstyled manuscript. (In other words, if you put in special features to enhanced the appearance of the manuscript, we will need to spend time taking them out of the file before we can get on with the business of publishing your article.) If you think any part of your manuscript might need to have a special appearance, please indicate this on the print-out only

An alternative to submitting a copy of your article on paper is to submit two copies of your paper on disk or via email. One copy should be without formatting, as described in the preceding paragraph, and one copy should be formatted to present the published appearance that you have in mind.

Instructions for typing the manuscript:

1. Margins. Before you start, set wide margins (approximately 1.5 inches).
2. Line spacing. Set line spacing to double space.
3. Justification. Please do not justify your text – allow it to run ragged on the right-hand margin.
4. Hyphenation. Turn off the hyphenation option. Only use hyphens when they are part of a word. Do not hyphenate words simply to make them fit into a line, since the change in line lengths during typesetting may result in these words being incorrectly hyphenated in the middle of the line.
5. Punctuation. When typing the manuscript, it is essential to be consistent, especially when punctuating. Only use one space following a period (full stop) – between sentences.
6. Accents and Special Characters. Many accents, symbols, and special characters are available as

ASCII characters in a word processor and should be used. However, if they are not available, use the @ sign as a substitute and mark the correct character in the margin of the print-out.

7. Carriage Return and Spacing. Never use the carriage return (enter) at the end of lines within a paragraph – allow the computer's automatic wrap-around function to turn the text over to the next line. Use the carriage return only: a.) at the end of a paragraph, b.) after a heading, c.) at the end of each entry in a list. Do not put in extra space around headings.

8. Paragraphs. Do not indent paragraphs. Start each paragraph on a new line with one line of space between paragraphs. Do not format the document to add extra spacing between paragraphs; simply use the carriage return to add the line of space.

9. Headings. Use normal type for headings. Capitalize the first letter of the first word only. Do not type headings in ALL CAPITALS or with the "Caps Lock" on. Do not underline headings. Do not type headings in bold or italic, or type a colon or period (full stop) after them. Headings should be coded by circled numbers handwritten in the margin of the print-out. You may also want to distinguish headings by using different font sizes. This must be done consistently. Headings should be ranged to the left-hand margin, not centered.

10. Use of Italic or Bold. Use *italic* sparingly (in the text only) for emphasis.

11. Dash (—) and hyphen (-). For a dash (e.g., to set off a phrase), type—(two hyphens, without spaces before, after, or between) or an em dash. Use two hyphens to separate numbers in a range; e.g., 4—5 months, pp. 251—257 or use an em dash.

12. Units. Always insert a space between a number and a unit; e.g., 5 mm.

13. Quotes. Please use "double" quotation marks. Use 'single' quotation marks for quotes within quotes.

14. List. Do not indent lists. If preparing a list within a list, write in the margin "indent list." Do not indent or tab new lines. Bullets, numbers, alphabet characters, or dashes may be used but please use logically and consistently.

15. Footnotes and Endnote/references: Footnote and endnote/reference numbers should be placed in parentheses and not superscripted. Footnotes and endnote/references should be placed within the article as normal text and not placed in footers or otherwise separated from the main body of the article.

16. Tables, illustrations, charts, photos. Tables, illustrations, charts, photos, though they may be placed within the article, should also accompany the article as separate (eg, graphic) files.

Title Page

The title page should carry 1) the title of the article, which should be concise but informative; 2) the name by which each author is known, with his or her highest academic degree(s) and institutional affiliation; 3) the name of the department(s) and institution(s) to which the work should be attributed; 4) disclaimers, if any; 5) the name and address of the author responsible for correspondence about the manuscript; 6) source(s) of support in the form of grants, equipment, drugs, or all of these; and 7) a short running head or footline of no more than 40 characters (count letters and spaces) at the foot of the title page.

Authorship

All persons designated as authors should qualify for authorship, and all those who qualify should be listed. Each author should have participated sufficiently in the work to take public responsibility for appropriate portions of the content. One or more authors should take responsibility for the integrity of the work as a whole, from inception to published article.

Abstract and Key Words

The second page should carry an abstract (of no more than 150 words for unstructured abstracts or 250 words for structured abstracts). The abstract should state the main points of the article or, if a research study, the purposes of the study or investigation, basic procedures (selection of study subjects or laboratory animals; observational and analytical methods), main findings (giving specific data and their statistical significance, if possible), and the principal conclusions. It should emphasize new and important aspects of the study or observations.

Below the abstract authors should provide, and identify as such, 3 to 10 key words or short phrases that will assist indexers in cross-indexing the article and may be published with the abstract

Acknowledgments

List all contributors who do not meet the criteria for authorship, such as a person who provided purely technical help, writing assistance, or a department chair who provided only general support. Financial and material support should also be acknowledged.

References

References should be numbered consecutively in the order in which they are first mentioned in the text. Identify references in text, tables, and legends by Arabic numerals in parentheses. References cited only in tables or figure legends should be numbered

in accordance with the sequence established by the first identification in the text of the particular table or figure.

Use the style of the examples below, which are based on the formats used by the NLM in *Index Medicus*. The titles of journals should be abbreviated according to the style used in *Index Medicus*. Consult the *List of Journals Indexed in Index Medicus* through the library's web site (<http://www.nlm.nih.gov>).

Tables

Type or print out each table with double spacing on a separate sheet of paper. Do not submit tables as photographs. Number tables consecutively in the order of their first citation in the text and supply a brief title for each. Give each column a short or abbreviated heading. Place explanatory matter in footnotes, not in the heading. Explain in footnotes all nonstandard abbreviations that are used in each table.

Identify statistical measures of variations, such as standard deviation and standard error of the mean. Do not use internal horizontal and vertical rules.

Be sure that each table is cited in the text.

If you use data from another published or unpublished source, obtain permission and acknowledge them fully.

Illustrations (Figures)

Figures should be professionally drawn and photographed; freehand or typewritten lettering is unacceptable. Instead of original drawings, x-ray films, and other material, send sharp, glossy, black-and-white photographic prints, usually 127 X 173 mm (5

X 7 inches) but no larger than 203 X 254 mm (8 X 10 inches). Letters, numbers, and symbols should be clear and even throughout and of sufficient size that when reduced for publication each item will still be legible. Titles and detailed explanations belong in the legends for illustrations not on the illustrations themselves.

Each figure should have a label pasted on its back indicating the number of the figure, author's name, and top of the figure. Do not write on the back of figures or scratch or mar them by using paper clips. Do not bend figures or mount them on cardboard.

Digital graphics

Illustrations may be submitted in digital format. Each figure should be submitted separately. File-types PDF, EPS, PageMaker, or files created by FreeHand, Photoshop, or other high-resolution drawing program are acceptable (in TIFF or GIF format, not JPG). Graphics embedded in a Word document are not acceptable.

If photographs of people are used, either the subjects must not be identifiable or their pictures must be accompanied by written permission to use the photograph. High resolution digital black-and-white photographs (tif 300 dpi) are also acceptable.

Figures should be numbered consecutively according to the order in which they have been first cited in the text. If a figure has been published, acknowledge the original source and submit written permission from the copyright holder to reproduce the material. Permission is required irrespective of authorship or publisher except for documents in the public domain.

Legends for Illustrations

Type or print out legends for illustrations using double spacing, starting on a separate page, with Arabic numerals corresponding to the illustrations. When symbols, arrows, numbers, or letters are used to identify parts of the illustrations, identify and explain each one clearly in the legend. Explain the internal scale and identify the method of staining in photomicrographs.

Abbreviations and Symbols

Use only standard abbreviations. Avoid abbreviations in the title and abstract. The full term for which an abbreviation stands should precede its first use in the text unless it is a standard unit of measurement.

Sending the Manuscript to the Journal

Send the hard copy of the manuscript and disk (unless email version is submitted) in a heavy-paper envelope, enclosing the copies and figures in cardboard, if necessary, to prevent the photographs from

being bent. Place photographs and transparencies in a separate heavy-paper envelope.

Manuscripts must be accompanied by a covering letter signed by all coauthors. This must include 1) information on prior or duplicate publication or submission elsewhere of any part of the work as defined earlier in this document; 2) a statement of financial or other relationships that might lead to a conflict of interest (see below); 3) a statement that the manuscript has been read and approved by all the authors, that the requirements for authorship as stated earlier in this document have been met, and that each author believes that the manuscript represents honest work; and 4) the name, address, email address, and telephone number of the corresponding author, who is responsible for communicating with the other authors about revisions and final approval of the proofs. The letter should give any additional information that may be helpful to the editor, such as the type of article in the particular journal that the manuscript represents and whether the author(s) would be willing to meet the cost of reproducing color illustrations.

The manuscript must be accompanied by copies of any permissions to reproduce published material, to use illustrations or report information about identifiable people, or to name people for their contributions.

Copyright Transfer

All accepted manuscripts become the permanent property of the American Institute of Homeopathy and may not be published elsewhere without written permission from the author and the AIH. If the author wishes to retain copyright (e.g., for articles that are intended to be part of a future publication), he/she should request permission via email or letter from the editor of the AJHM, which, in most cases will be happily provided.
