

The Right Similimum Cures All

ABSTRACT: *The patient may come to us for any complaint, but we need to take full history and find the constitutional treatment. This then does a blanket cure, even for complaints patient did not mention to us. Here in this case it cured Goitre.*

Dr KETAN SHAH MD (HOM)

Master A, 1 yr 7 mths, came to my clinic, on 15-6-2000 with his mother, with the following COMPLAINTS.

SKIN: Eruption since 1 year. Dorsum of hand. Crusty. Arm Itching++. Leg, bleeding on scratching. He tried Allopathy but no results.

GIT: Constipated. First part of stool hard then soft with foul smelling. Appetite: Less+.

SPEECH: Delayed.

RESPIRATORY TRACT: Gets cough and cold frequently.

K/C/O: Primary hypothyroidism. (Taking Tab Eltroxin since age of 6 months).

PERSONAL HISTORY

APPETITE: Less + +, **CRAVING:** For sweets. **THIRST:** Less
 URINE: Chest

SLEEP: Occasionally disturbed

Pt stays with mother, father and brother -11y. Mother has cough and cold complaint. And Hypertension on maternal side.

During the first consultation, child was moving constantly in the clinic, coming in and going out of my chamber, throwing bottles which were placed on the stand. He could not be trusted with the TV. He threw everything, was very obstinate and fearless. He beat other children and even bit them. He kills insects like ants, cockroach and eats them. He enjoys company, is very attached to mother. He likes to go out. He enjoys bathing. Loves to listen music and to dance while watching TV. I selected the remedy *Tarantula-h*

RUBRICS

Restlessness
Destructive

Throws things.

Biting

Busy, Fruitlessly

Cruelty.

Music likes.

After *Tarentula-h*, 200, 2 doses, pt gradually improved. Rx still continuing but skin eruption much better, itching totally gone, appetite >, started speaking and stools become normal. During that period, he got cough and cold 2 to 3 times which was better with *Ars-alb*. Later he was given *Tub-b* 1M as the intercurrent.

During treatment pt was taking Eltroxin regularly, but after seeing over all improvement I asked him to stop Eltroxin in October 2000. Result in Hypothyroidism as following.

BEFORE TREATMENT

1 st Report 7-11-98	2 nd Report 17-2-2000	Normal Value
	(Stop Eltroxin, 2 months back)	
T3 0.5	1.6	0.7 to2
T4 1.3	12.3	4.8 to 11.5
TSH 120.0	2.1	0.5 to 4.0

Pt consulted me actually for his skin complaints but because the remedy selected was the similimum, his hypothyroidism was also treated, which is worth noting. Hence the main intention for presentation of his case was to prove that if a similimum selected is correct it can treat the patient as a whole.
