

A SOURCE ANALYSIS OF
HYDROPHOBINUM/LYSSIN
IN COMPARISON WITH
HUMAN SYMPTOMS AND
FIVE CLINICAL REPORTS

Dr Ardhendu Sekhar Chatterjee, Siddeswari Lane No 2, Kanchrapara, West Bengal

Lyssin or Hydrophobinum is prepared from the saliva of a rabied dog. So the medicine also contains the dynamic state of the rabies virus that collected from a diseased/rabied dog. Naturally the medicine has some similarity with the general character of dog, especially of raged state and the disease symptoms of rabies.

Here we are discussing such symptoms and make a symptomatic analysis on the basis of which we can combat diseases of the human system homoeopathically.

General characteristic of Dog

1) Dog neither tolerates hot or cold water.

- 2) Smelling, hearing capacity and identifying quality is extreme.
- 3) Tongue is dry, rosy - red, tendency to salivation and protrusion of tongue.
- 4) Hungry, salivation if not food given at time, eat cold food, cold milk, meat, avoid egg.
- 5) Stool is very offensive, sticky or hard lumpy, blackish.
- 6) Urine is also very offensive, tendency to urinate near a watery place, side of river.
- 7) Sleeps bending knees, easily break by slight sound.
- 8) Long lasting sexual desire.
- 9) Dog is fond of music, dances; very faithful also

suspicious: wants to lie in a dark place; some symptoms like suspiciousness increased at night; has tendency to bite and scrame (to kill).

- 10) Avoid any pressure on neck; Ulceration if any has deep irregular margin not easily heal; tendency to implantation of lice within the hairy body.

Symptoms of the Rabies:-

Paraesthesia or pain at the site of bite with insidious fever. Anxiety, fear of water, thirsty but can't drink because of contraction of diaphragm and other inspiratory muscles and thereafter the sight or even the sound of water may help to develop such symptoms and

fear. Paroximally spitting, biting, maniacal behaviour, delusions, hallucinations, hyperpyrexia may be developed.

Symptomatic Similarity With The Disease Of Human System :-

The medicine is suitable for any diseases of human system where the patient has some qualitative similarity of the following symptoms :-

- 1) Azubithermal or hot in constitution.
- 2) Acuteness of all senses i.e., hearing, smelling, identification etc.
- 3) Dry, red tongue, salivation during sleep or always.
- 4) Difficulty for deglutition, can't deglut anything without water.
- 5) Hungry, can't tolerate empty stomach; desire for meat, milk, cold food, intolerance of egg (causes nausea).
- 6) Polyurea, urinary urging on touching water, on hearing the sound of water.
- 7) Tendency to sleep on curling like dog, sleeplessness due to anxiety, awoken by slightest noise.
- 8) Fond of music, dances, dark place; extreme irritable, rage, tendency to bite, scratch, tear even to kill; fear of water, sound, darkness, startled-out from noise, convulsion by the sound of water, noise etc.
- 9) Prefers loose clothing, delayed healing, sun-heat intolerance.

Case No. 1

Ref. no. 37/285. A male, 20, unmarried, came on 05-08-88,

with EARLY SEMINAL DISCHARGE, poor erection with frequent urination; CARRIES TEETH PROBLEMS, pain relieved by heat; ABDOMINAL PAIN, for two to three years, comes gradually, after eating, night and goes gradually and by pressure; HEMICRANIA, left sided, on sun exposure. He had F/H of suspected tuberculosis and cold; P/H of dog scratching two to three years ago prolonged masturbatic tendency skin diseases at winter, warts 8 to 9 years ago.
