FOREWORD

The essentials of rapid and accurate clinic or office repertorial work are, probably, assembled in this book. A valuable feature is the translation adapted from Dr. Ide's (Stettin, Germany) unique and complete arrangement of Time Modalities (*Berliner Zeitschrift homöopathischer Ärzte*, Band xxv, Hefte, 3 and 4).

The valence of remedies is indicated in the text by the type employed: "CAPITAL" and "Roman," the greater and the lesser degree of importance, and other degrees, found properly in the larger repertories, are omitted here.

The CLINIC REPERTORY is inscribed to
"Old School Men"

as giving insight into the delicate reactions of the human organism; as a means of deliverance from therapeutic nihilism; and as an introduction to a greater science of therapy in conditions amenable to cure by the use of drugs.

To authors whose compilations in various languages have afforded data, due thanks are rendered. Originality in homœopathic materia medica is not the invention of new things, but a more helpful arrangement of durable pathogenic and clinical facts.

Preface to First Indian Edition.

The Clinic Repertory by Dr. P. W. Shedd was published in 1908. It is a helpful companion in selecting Homœopathic medicine. It contains many new features which are not ordinarily found in other compilation. Besides Regional Repertory ordinarily found in other books on the subject, a Therapeutic index, Key notes of fifty medicines, common sequences of medicines and their dynamic antidotes to poisons and regional and time modalities, periodicity of medicine. The last chapter is a translation of Dr. Ide's (Stettin, Germany) contribution on the subject.

These are undoubtedly essential in rapid and accurate selection of a remedy at the bed side or in office.

The book was out of print for a long time and on the persistent demand of several Homœopathic practitioners we have obtained permission of Messrs Boericke & Tafel to reprint it and hope they will appreciate it.

< from cold; evening and night; close warm room (Sulf).
Fever with pronounced chilliness.
Complaints from suppressed menses.
Aversion to fats, warm food.
Commonly hunger; appetite for spirituous liquors.
Constipation or diarrhea.
Menses too late, short, scanty.
Complaints from getting feet wet.

Rhus: Depression, paralysis; decomposition and dissolution of tissues.
Restlessness; constantly moving during sleep.
All secretions and excretions are acrid, fetid.
Intense chill at 7 P. M.
Great sensitiveness to the open air.
Chill preceded by a dry, teasing cough.
< from getting wet, especially when overheated.
• < from straining or stretching muscle or tendon (Calc., chronic).
< at night; after midnight.
< wet weather or damp cold (Bry., < dry cold).
< when at rest.

Rhus.

< on beginning to move.

Rheumatism, drawing, tearing aching pains in fibrous tissue, joints and nerve sheaths, with lameness and formication, with or without swelling and redness. Restless. Hip and wrist particularly apt to be affected.

Typhoid; slow mentality; incoherent speech or delirium; lips dry, crusty; red-tipped tongue; diarrhea < night, involuntary during sleep; broncho-pneumonic complications; restlessness, frightful dreams, frequent waking; great prostration.

Erysipelas, vesicular; shining-red; swelling; spreads from left to *right* (Rhus).

Sepia: Relaxed, sallow, chilly, gouty-rheumatic, stiff-jointed brunette, with pelvic disorders (uteroptosis).

Turbid offensive urine with adhesive red sediment.

Inactive bowels.

< in sultry, moist weather.

< in cold air; east wind.

Flushes running upward and ending in sweat and a weak, faint feeling.

> in the afternoon.

> by exercise, the livelier the better.

> drawing up the limbs (Puls., extends them).

< from washing; laundry work (cf. Phos.).

Liver and bladder troubles.

Menses too late and scanty; irregular; early and profuse with sharp clutching pains.

Silicea: > from warmth and summer.

< from cold, approach of winter, winter.

Silicea :

< before or during a storm.

< from nerve stimuli.

• < in the A. M.

Disorders of assimilation and metabolism in adults (Calc., children).

Lack of animal heat, always chilly, even when exercising.

Pot-bellied, weak-ankled children with much heat sweat, often offensive (Calc., sour), at night.

Yielding, pusillanimous, or, full of "grit."

Menses gen. too late (Puls. :—too soon, Calc.) and long (Sulf., too short).

Increased bodily irritability, oversensitive to pain.

Better in wet, damp, moist, humid weather.

Sulfur: Secretions and excretions acrid, excoriating—tears, coryza, catarrh, stool, urine, sweat, leucorrhœa, ulcer-exudates, etc.—and offensive.

< 11 A. M.; diarrhea < early morning, driving out of bed.

> in mild equable temperature, in dry open air, from cold.

< from water (bathing, etc.).

< from standing.

Skin rough, dirty, diseased, inclined to excoriations, heals slowly.

• Mucosal borders, especially lips (Aloe), have a peculiar vivid redness.

Hot vertex, cold feet.

Hunger at 11 A. M.

Weak spine, walks stooped.

Eats ravenously, stays thin, always dyspeptic.

Always theorising, — Apis, Cannabis Ind.

POISONS: ANTIDOTES.

General rule: Empty stomach (unless probably much corroded by acid); by emetic (hypo of apomorphine; zinc sulfate, 10—30 grains, children, 5 grains; mustard water; hot saline); by stomach tube, quart at a time (potass. perm. in ptomaines and alkaloids; Glauber's or Epsom salts in lead or carbolic acid); if poison is in intestines, purge (castor oil, except in phosphorus).

Acetanilid: Atropin, strychnin, oxygen, heat.

Acids: Solutions of soap, chalk, magnesia, wall-plaster;
° follow with milk; use emetics and pump carefully on account of possible rupture. In oxalic; chalk and water best; no alkalis.

Aconite: Digitalis, atropin, tannic acid, artificial respiration, warmth.

- Arsenic (rat poison, Paris green, Fowler's sol.):** Fresh ferric hydroxid (dialyzed iron + milk of magnesia) 2—4 teaspoonfuls every 10 minutes in warm water. Raw eggs, lime water, flour and water; no milk.
- Atropin (belladonna, hyoscyamus, stramonium):** Tannic acid emetics, pump, pilocarpine, morphine, brandy, coffee, red pepper, ammonia externally, and internally.
- Bites of reptiles, "mad dog":** Suck wound; wash with potass perm.; ligate above it; cauterize. Whiskey in quantity (reptile bite).
- Cantharis:** Emetics; avoid fats and milk; demulcents; much water; opium.
- Carbolic acid:** Wash stomach with tepid water; if possible with chemical antidotes as Epsom or Glauber's salts, dilute sulfuric acid or vinegar. When carbolic is out, follow with milk, oils. Alcohol antidotes the corrosive effect.
- Chloral:** Amyl nitrite; strychnin, coffee, atropin, artificial respiration; heat.
- Cocain:** Amyl nitrite, tannic acid, chloral, alcohol, opium.
- Digitalis:** Tannic acid (empty stomach first); aconite; recumbent posture.
- Fungi, Toadstools, etc:** Epsom salt, quick-purge, stimulants.
- Gas (illuminating); charcoal fumes:** Oxygen; intravenous-saline; transfusion; artificial respiration; cold affusion, stimulants.
- Hair-dye (silver and its compounds):** Plenty of common salt water.
- Hydrocyanic acid and cyanides:** Dilute ammonia; atropin and heart stimulants; artificial respiration; mix-

- ture of a ferrous and ferric salt, forming insoluble Prussian blue.
- Iodin and Iodides:** Starch or flour well mixed with water.
- Mercury and compounds, as, corrosive sublimate:** Egg albumin or milk; lime-water, flour, charcoal; follow with emetic or pump; no Na Cl.
- Opium and its alkaloids:** Wash stomach with potass. perm.; strong coffee by mouth or rectum; keep patient moving about; cold affusion, faradism to chest; evacuate bladder.
- Phosphorus:** No oils or fats; copper sulfate in 3 grain dose, dilute solution, every five minutes until emesis; free lime water; old (oxidized) turpentine; mucilaginous drinks.
- Silver nitrate (v. Hair-dye).**
- Strychnin, Nux vomica:** Tannic acid, follow with emetic or pump; potass. perm.; tobacco by enema; chloroform inhalation; amyl nitrite; ice to spine; camphor; evacuate bladder; as perfect quiet as possible.
